- 12. Feature index & permissions

Start with your role, then follow the task you need. This guide explains the current app in plain language, including account setup, selling, stock, reports, and account administration.

Checked against the application on **4 October 2026**. Amounts are Philippine pesos unless a screen explicitly says centavos. Operational dates and times use **Asia/Manila**.

Choose your guide

I am a...	Start here	What you will learn
Platform administrator	Platform admin	Sign in with two-factor authentication, create owners, set limits, control access, inspect records.
Business owner	Owner	Set up businesses, branches, products, stock, staff and terminals; review reports and settings.
Manager	Manager	Activate staff access, oversee assigned branches, handle stock, review reports and approve cashier actions.
Cashier	Cashier	Activate a PIN, open a shift, sell, request approvals and close the drawer.
Website / CMS editor	CMS editor	Edit the public website, upload marketing images, publish policies and manage CMS users.

Find a task

I want to...	Read
Open an account or help someone activate theirs	Accounts and access
Set up a new store from beginning to end	Complete workflows
Pair a tablet or computer with a branch	POS terminal
Make a sale, take payment or print a receipt	POS terminal
Void or refund a sale	POS terminal
Receive stock, transfer items or count shelves	Owner or Manager
Understand sales, tax, profit or missing cash	Owner or Manager

Check whether a feature is covered	Feature index

Open the app

Destination	Link	Used by
Public website	Sentry website	Visitors and anyone requesting access
Portal sign-in	Sign in	Platform admins, owners and managers
Platform panel	Platform admin	Platform admins
Owner portal	Owner portal	Owners
Manager portal	Manager portal	Managers
Staff setup	Set up staff access	Managers with a temporary setup PIN
POS terminal	Open POS	Owners, managers and cashiers at a counter
Website editor	Sentry CMS	CMS users with a separate account

How Sentry is organized

A **platform admin** creates an **owner account**. The owner creates a **business**, adds its **branches**, prepares a shared **catalog**, and assigns **staff** to branches. Each counter browser is paired as a **terminal** in one branch. A named operator opens a **shift** before selling.

- A business is the organization whose catalog, settings and reporting you manage.
- A branch is a location. Stock is counted separately for each branch.
- A terminal is a paired counter browser. It has its own sales history and drawer shifts.
- A staff account belongs to a business and has assigned branches.
- A shift records one operator's opening float, sales, cash movements and closing count.

Managers work within their assigned branches. Cashiers use the POS. CMS accounts edit the marketing website; they do not provide owner, manager or platform access.

What works in the current deployment

Email delivery is disabled while Resend is not configured. Existing active accounts can sign in and operate the app. Cashier setup can use the temporary PIN shown to the owner. New owner activation, new manager setup, email password recovery and daily email summaries need working email delivery. An “emailed” message on a screen does not mean a message was delivered in this setup. See [Accounts and access](#).

The POS currently needs the online service to complete operations. A saved cart or pending-payment retry is not a complete offline selling mode. The free Render service can also take time to respond after being idle; see [Troubleshooting](#).

Already active test accounts for **Kape Diaria (Demo)** can be used for practice. Get their credentials from the person who provided your access; this manual contains no passwords or PINs. Select the demo business explicitly when reviewing its reports because demo data is excluded from ordinary combined owner totals.

How to use this documentation

In the searchable HTML copy, choose a chapter from the sidebar, use **Find a task** to search headings and instructions, and use **On this page** to jump within a chapter. The PDF contains the full manual for printing. These Markdown chapters are the editable source.

Each procedure tells you **who can do it**, **where to go**, **what to do**, and **what should happen next**. Bold text identifies screen labels. Read a procedure's limits before carrying out an action that changes a completed sale, account, or stock balance.

[Next: accounts and access](#) →

Accounts and access

[Guide home](#) · [Platform admin](#) · [Owner](#) · [Manager](#) · [Cashier](#)

How do I open an account?

Sentry does not have public self-registration for store users. Your account is created by the person responsible for your role.

Account	Who creates it?	How you finish setup
First platform admin	Deployment operator	Receive initial credentials, sign in, enroll an authenticator, save recovery codes.
Owner	Platform admin	Open the invitation email, choose a password, then sign in.
Manager	Business owner	Use the emailed temporary PIN on Set up staff access ; choose a password and a permanent terminal PIN.
Cashier	Business owner	Select your name at a paired terminal and replace the owner's temporary PIN with your own permanent PIN.
CMS user	Existing CMS administrator	Receive separate CMS credentials and sign in at <code>/cms</code> .

If you are a new business owner, use **Request access** on the public website or contact the platform team. **Request access** opens an email draft; it does not create an account or submit an in-app registration form.

Current email restriction

Email is intentionally disabled in this deployment. New owner invitations and manager temporary PINs are not delivered. The app has no owner invitation-copy button or manager temporary-PIN display as a replacement. Email password-reset links and daily summary emails are also unavailable.

Use an account that is already active for testing. Ask the deployment operator to enable email before using new owner or manager onboarding. Cashier creation and setup can still work because the owner receives the cashier's temporary PIN directly on screen.

Do not reset a working manager account just to test email recovery: owner-managed reset makes it pending and removes the affected credential, so it can become unusable while email is disabled.

Passwords, PINs and authenticator codes

Credential	Purpose	Where it is entered
Portal password	Sign in as platform admin, owner or manager	Portal Sign in

Credential	Purpose	Where it is entered
Temporary staff PIN	Complete one staff setup/reset challenge	Staff setup page or terminal setup screen
Permanent terminal PIN	Unlock POS as a named owner, manager or cashier	Terminal operator screen
Owner terminal PIN	Owner terminal access and in-person approval of protected cashier actions	Set under owner settings; enter on POS
Authenticator code	Second sign-in step for platform admins	Two-factor authentication
Recovery code	One-time alternative when an admin cannot use the authenticator	Same two-factor code field
CMS password	Access marketing content	Separate CMS sign-in

Terminal PINs contain **six digits**. Temporary staff PINs expire after **15 minutes**, permit at most **five wrong attempts**, and are used once. Choose a different permanent PIN from the temporary PIN. Portal passwords set through owner/staff setup must contain at least **eight characters**.

Platform admin: first sign-in

Before you start: obtain the platform admin email and initial password from the deployment operator. Initial platform provisioning is an operator task; there is no **Create platform admin** screen in the store portal. A CMS login is a different account.

1. Open [Sign in](#).
2. Enter your email address and password, then choose **Sign in**.
3. On first sign-in, Sentry opens **Set up two-factor authentication**.
4. Scan the QR code in your authenticator app, or enter the displayed setup key manually.
5. Enter the current six-digit code and submit the setup form.
6. Save all **eight recovery codes** somewhere you can retrieve them. They are shown once; each works once.
7. Choose **I have saved these — sign in**.
8. Sign in again and complete the two-factor step with a fresh authenticator code.

Result: you reach the platform panel. Later sign-ins use your password followed by the current authenticator code. If you have lost access to the authenticator, enter one unused recovery code in the same field. An already accepted authenticator code cannot be reused; wait for the next code.

If the two-factor page expires, start again from sign-in. There is no self-service two-factor reset or recovery-code regeneration page in the current app. Contact the deployment operator if both your authenticator and recovery codes are unavailable.

Platform admin: create an owner account

Where: [Platform panel](#) → **Owners** → **Add owner**. Full access-control procedures are in [Platform admin](#).

1. Enter **Business owner name** and **Email address**.
2. Set **Business limit** to a whole number between **1 and 1000**. Demo businesses do not count against this limit.

3. Submit the form.
4. Confirm the owner detail page shows the correct name, email and business limit.
5. With working email, tell the owner to open the invitation and finish the next procedure within seven days.

Result: an owner record exists, but the user cannot sign in until they have set a password. An **Active** status badge alone does not prove activation is complete. The admin cannot choose or view the owner's password.

With email disabled, creating the record does not give the owner usable access. There is currently no admin UI to resend an owner invite or copy its activation link. An expired or undelivered invitation needs platform/operator assistance; do not try to create the same email again.

Owner: activate your account

Needs: a valid owner invitation from Sentry and working email delivery.

1. Open the invitation email and follow its complete activation link.
2. On **Activate your account**, enter a password of at least eight characters.
3. Enter the same password in the confirmation field.
4. Choose **Activate account**.
5. When returned to sign-in, enter your email and the password you just chose.

Result: your owner portal is available. A demo business is created for practice as part of activation. An invitation expires after **seven days** and cannot be reused once accepted.

If the page says the token is missing, reopen the original link without removing any part of it. If it is expired or already used, contact the platform team. The sign-in password field will not activate an unused invitation.

Owner: create manager or cashier access

Where: open the relevant business, then **Staff**. **Needs:** at least one branch in that business.

1. Find **Add staff** on **Staff access**.
2. Enter **Name**.
3. Choose **Manager** or **Cashier** under **Role**.
4. Enter **Email address** for a manager. A cashier's email is optional.
5. Tick at least one **Assigned branches** checkbox.
6. Choose **Add staff member**.
7. For a cashier, record the temporary PIN shown once, give it directly to that person, then choose **I have shared this PIN** to hide it.
8. For a manager, have them check their email for the setup PIN when email delivery is enabled.

Result: staff status is **Pending** until the person finishes their role's setup. The role determines access; a manager's portal access is limited to assigned branches. A cashier's email does not grant portal access.

The manager's temporary PIN is not shown to the owner. In the current email-disabled deployment, new manager setup stops here. Existing active managers can continue using their existing credentials.

Manager: complete first-time setup

Needs: owner-created pending manager account, assigned branches and the latest emailed temporary PIN.

1. Open [Set up staff access](#), or follow the staff setup link from sign-in.
2. Enter the email address used by the owner.
3. Enter your six-digit **temporary PIN**.
4. Choose a password of at least eight characters and confirm it.
5. Choose a different six-digit **terminal PIN** and confirm it.
6. Submit setup.

Result: your account becomes **Active** and you enter the manager portal. Use your password for portal sign-in and your permanent PIN at assigned branch terminals.

An expired/used challenge needs the owner to issue a new temporary PIN. Always use the latest one. See [Manager](#) for your everyday workflow.

Cashier: complete first-time setup

Needs: owner-created cashier, temporary PIN from the owner and a terminal paired to an assigned branch.

1. Open the POS on the paired counter device.
2. Select your name from the operator list.
3. Enter the temporary six-digit PIN given to you by the owner.
4. Choose a different permanent six-digit PIN and enter it again to confirm.
5. Finish setup.

Result: your account becomes **Active** and the terminal unlocks for you. If your name is absent, the owner must check your branch assignment and staff status. See [Cashier](#) and [POS terminal](#).

Sign in after setup

Owner or manager: open portal sign-in, enter your email/password and choose **Sign in**. Sentry sends you to your role's portal. The password visibility button lets you check your typing before submitting.

Cashier: open a paired terminal, choose your name and enter your permanent PIN. Cashiers do not sign in to the owner/manager portal.

Owner at POS: set your **Owner terminal PIN** in owner settings first, then select your owner identity at the terminal and use that PIN. Pairing a device with your owner password and unlocking as an operator are separate steps.

CMS user: open [/cms](#) and use your CMS credentials. Signing in there does not sign you into the platform or store portal.

Portal passwords and permanent operator PINs lock temporarily after **four failed attempts**. Wait **five minutes** or follow the displayed countdown before trying again. This differs from the temporary staff PIN's five-attempt limit.

Owner: edit staff details and branch access

Where: the business's **Staff** page → person's card → **Edit name, role and branches**.

1. Change the name, role, email or assigned branches as needed.
2. Keep at least one branch assignment.
3. Provide a manager email when changing to the manager role.
4. Choose **Save access** and confirm the new details.

A role change clears both password and PIN and requires the new role's setup. Email, role or branch updates end current staff sessions; tell the staff member to sign in/unlock again. The full edit form submits branch assignments even if they look unchanged, so saving it can end sessions even when you only edit the name. Existing credentials are kept when the role is unchanged. Deactivated staff cannot be edited until reactivated.

Owner: issue a new temporary PIN

When: setup expired, the temporary PIN was lost, or the person is still pending.

1. Open that staff member's controls on **Staff**.
2. Tick **I confirm this access change and any session revocation**.
3. Choose **Issue fresh setup PIN** for a pending cashier or **Resend setup email** for a pending manager.
4. For a cashier, capture the newly displayed PIN and hand it to them.
5. For a manager, have them use the newly emailed PIN when email is available.
6. Have the person finish the appropriate setup within 15 minutes.

Result: previous temporary PINs no longer work. Manager challenges remain email-only.

Owner: reset a staff member's credentials

Action	What changes	How the person finishes
Reset terminal PIN	Clears PIN, ends active sessions and makes staff pending	Use the new temporary PIN at a paired assigned terminal; choose a new PIN.
Reset portal password (manager)	Clears password, ends active sessions and makes the manager pending	Open staff setup in password-reset mode; use the emailed temporary PIN and choose a new password.

1. Open the staff member's controls.
2. Tick **I confirm this access change and any session revocation**.
3. Choose the reset action you need.
4. Give the cashier the PIN shown on screen, or direct the manager to their email.
5. Complete reset before the challenge expires.

A manager password-only reset uses **Staff password reset** and preserves an existing terminal PIN. A PIN-only reset normally finishes at POS. If either credential was already missing before the manager reset, Sentry requires full manager setup and clears both credentials.

These actions interrupt access immediately. With email disabled, managers cannot finish the emailed reset challenge through the current UI.

Owner: deactivate or reactivate staff

Deactivate: open staff controls, tick **I confirm this access change and any session revocation**, then choose **Deactivate**. The person loses portal and terminal sessions, and existing temporary challenges are invalidated. Use this when someone should no longer work in the business.

Reactivate: tick the same confirmation checkbox and choose **Reactivate** on the deactivated staff member. Complete retained credentials can be reused; if setup credentials are missing, a new setup challenge is issued. Check status and tell the person whether to use existing credentials or complete setup. A manager who needs a new challenge still needs email delivery.

Do not deactivate the operator of an open drawer as a routine handover method. Close the shift normally first. See emergency-close limits in [POS terminal](#).

Forgot your portal password?

When email is enabled:

1. Choose **Forgot password?** on sign-in.
2. Enter the account email and submit.
3. Open the reset email within **one hour**.
4. Follow the link, set a password of at least eight characters and confirm it.
5. Sign in again. Existing portal sessions are ended.

The request screen gives a general response even when an email is not found. It does not confirm that an account exists or that delivery happened.

This works for an already active manager's portal password as well as owner/admin passwords when email works. It does not activate pending staff, reactivate deactivated staff, change terminal PINs, or replace manager first-time setup. With email disabled, ask your account administrator for help; no reset email will arrive.

End your session

Use portal **Sign out** when finished. At a shared counter, use **Lock** whenever stepping away. Lock preserves the current cart and drawer, so another operator cannot simply take over your open shift. Close your shift before a regular handover. See [POS terminal](#).

Next: [complete workflows](#) →

Complete workflows

[Guide home](#) · [Accounts and access](#)

These workflows connect the role guides. Follow each row in order; open the linked chapter for the detailed form instructions.

Open a new store

Goal: an owner has a working branch, catalog, stock, staff and paired counter.

Step	Who acts?	What to do	Ready when...
1	Platform admin	Create the owner with the right email and business limit.	Owner record exists and invitation is delivered.
2	Owner	Accept invitation , set password and sign in.	Owner portal opens; demo business is available.
3	Owner	Create business and branch .	Business type, operating-day cutoff, branch code and address are correct.
4	Owner	Prepare catalog : categories, products, variants, modifiers and named discounts.	Active sellable items have the correct price and configuration.
5	Owner/assigned manager	Receive opening stock , including expiry where tracked.	The branch has usable quantities; variant stock is received against the right variant.
6	Owner	Configure settings : tax/receipt, cash close and owner terminal PIN.	Receipts and authorization rules match the intended operation.
7	Owner + staff	Create staff and finish setup .	Staff are active and assigned to the intended branches.
8	Owner	Pair each counter browser with the branch.	Correct terminal name/code appears and operators can unlock.
9	Operator	Open shift and make a practice sale .	Payment records once, receipt can be printed and stock changes as expected.
10	Operator + owner/manager	Close shift and review reports .	Counted cash, variance and completed sale appear in the appropriate scope.

In the current email-disabled deployment, new owner and new manager activation cannot finish through the usual workflow. Use the already active demo accounts to practice the later steps. Do not enter pretend sales into a live trading business.

Practice with the demo business

1. Sign in using an already active demo account provided to you.
2. Owner: select **Kape Diaria (Demo)** in **Businesses**. Manager: use the assigned demo branches.
3. Pair a practice counter with the intended demo branch, such as **Marikit**.
4. Unlock using the account's permanent PIN; existing demo users do not need temporary setup.
5. Open a shift, sell sample items, hold/resume a cart and print/preview a receipt.
6. Close the shift with a counted cash amount.
7. Select the demo business explicitly in reports to inspect results.

Demo activity does not count in ordinary combined owner totals. An owner can reset the demo using the dedicated [demo reset procedure](#); reset removes practice operations and unpairs demo terminals. Download anything you want to keep before resetting.

Run a normal cashier day

Stage	Cashier	Manager/owner
Start	Check correct branch/terminal, unlock by name, count float and open a shift.	Check staff assignment and stock readiness.
During service	Build cart, choose items/options, apply allowed discounts and take payment.	Approve protected actions in person where required.
Customer waits	Hold the cart; resume it later on this terminal.	Help resolve unavailable stock/options if needed.
Cash movement	Record cash in/out with a reason rather than altering sales.	Review cash movements and unusual differences.
Step away	Lock; resume as the same operator.	Do not take over an eligible operator's open drawer.
End	Resolve pending payment, count cash, close shift and print/preview Z report.	Review variance, exceptions and sales.
Handover	Lock after the shift is closed.	Next operator unlocks and opens a separate shift.

Detailed instructions: [Cashier](#), [Manager](#), [POS terminal](#).

Correct a customer transaction

1. Before payment, edit or cancel the cart in the Sale screen.
2. After payment, open terminal **History** and find the receipt.
3. Check whether the eligible correction is a **Void** or **Refund**. They have different shift/time requirements; use the [POS procedure](#).
4. Enter the reason and obtain the required manager/owner PIN approval.
5. Submit once and check the resulting sale status.

6. Return money through the original cash/card/wallet process your store uses. Recording a POS refund is not an automatic payment-provider reversal.
7. Review stock restoration and report totals if relevant.

The current app refunds whole sales rather than selected lines or partial amounts. If a payment result is uncertain because the network dropped, resolve the saved payment attempt before starting a new sale for the same order.

Receive, transfer and count stock

Receive delivery: owner/assigned manager opens portal stock, selects branch/product/variant, enters quantity and expiry if required, and submits. Owner can record unit cost; managers cannot manage costs.

Move stock: owner/authorized manager selects source and destination branches in the same business and posts a [transfer](#). Managers need access to the source; the destination list can include other branches of that business without granting access to their records. Check the transfer history and have an authorized person confirm the destination balance.

Count shelves: create a [draft stock count](#), enter counted quantities for each row, review and post. Posting adjusts stock by the recorded difference. It is a one-time posting; edits belong in the draft before posting.

Terminal **Stock** → **Adjust** records a correction with a reason. Delivery receiving, transfers, stock counts and the expiry overview live in the portal.

Review daily performance

1. Owner or manager opens the dashboard.
2. Select the business/assigned branch and date scope you want.
3. Review sales, payment mix, stock alerts, open shifts and cash variance.
4. Open the relevant analytics tab to investigate a product, terminal, discount, tax or shift question.
5. Owner uses **Profit** and **Leaks** for cost-based results; these are not available to managers.
6. Export the report if needed, observing the report-specific export limits in the role guide.
7. Follow up on stock, missing counts, void/refund reasons and open drawers through the operational procedures.

Dates follow each business's configured operating-day cutoff, so a trading day can cross midnight. Daily email summaries are unavailable while email delivery is disabled; use the portal reports directly.

Recover staff access

1. Confirm name, role, assigned branches and status in the owner's **Staff** page.
2. If merely locked from wrong attempts, wait for the lockout countdown rather than resetting credentials.
3. If pending, issue a fresh temporary PIN and complete the matching setup.
4. If a permanent credential is forgotten, use the owner's specific password/PIN reset control.
5. Confirm **Active** status and have the person unlock/sign in again.

Use [Accounts](#) and [access](#) for exact effects. New manager challenges require email; they cannot be completed from an owner-visible PIN in this deployment.

Next: POS terminal →

Platform administrator guide

[Guide home](#) · [Accounts and access](#) · [Complete workflows](#)

Your job: give owners access, manage their business limits, control account availability and inspect tenant records. Owners manage their own store data.

Quick start

1. Complete platform-admin sign-in and authenticator setup in [Accounts and access](#).
2. Open [Platform panel](#).
3. Choose **Owners** to see accounts or **Metrics** to see platform counts.
4. Use **Add owner** to provision an owner.
5. Have the owner complete invitation activation before expecting them to create businesses.

Current deployment: owner invitation email is disabled. Creating an owner record will not deliver usable activation access. Existing activated owners remain usable.

What the panel contains

Screen	Purpose
Owners	Name, email, status, allowed business count and creation date for each owner.
Owner detail	Edit owner name/limit, suspend or reinstate, and open the owner's businesses.
Business overview	Read branches and business activity.
Business data	Inspect catalog, sales, payments, shifts, stock, counts and terminals.
Metrics	Platform totals and owner access-status counts.

Create an owner

Where: **Owners** → **Add owner**.

1. Enter the business owner's name and email.
2. Choose the business limit, from **1** to **1000**.
3. Submit the form.
4. Review the resulting owner detail page.
5. When mail is configured, the owner uses the invitation within seven days and sets their own password.

The full activation procedure and disabled-email limits are in [Accounts and access](#). An email already used by an account cannot be created again. The current panel has no owner invite resend/copy-link control.

Change an owner's name or business limit

Where: **Owners** → **owner name** → **Account**.

1. Edit **Owner name** and/or **Business limit**.
2. Choose **Save account**.
3. Check for **Account updated**. and the expected values.

The limit controls creation of real businesses; demo businesses do not count. Changing the limit does not delete existing businesses. Owner email and password are not editable through this form.

Understand account status

Status	Portal access	Paired terminals
Active	Allowed after credentials/activation are complete	Allowed with valid device/operator access
Suspended	Blocked immediately	A terminal with an already open shift can continue within the 24-hour grace period from suspension
Hard suspended	Blocked immediately	Blocked immediately, including during a shift
Closed	Blocked	Blocked; this is account closure, not a reversible suspension

The normal suspension grace is measured from the suspension time. It requires an open shift on that terminal and ends at 24 hours or when that shift closes. A terminal without an open shift has no grace. Archiving a business or branch also invalidates affected terminal access.

Suspend an owner

Where: **Owner detail** → **Access**.

1. Check that you have selected the intended owner.
2. Choose **Suspend** for ordinary suspension or **Hard suspend** for immediate terminal shutdown.
3. Read the confirmation message describing the effect.
4. Choose **Confirm suspension** or **Confirm hard suspension**. Choose **Cancel** to leave the account as it is.
5. Verify the new status badge.

This affects the owner's businesses and staff access. Use the grace rules above when deciding how operating counters will be affected.

Reinstate a suspended owner

1. Open the suspended owner's detail page.

2. Choose **Reinstate account**.
3. Verify status is **Active**.
4. Have the owner/staff sign in or unlock again if their previous attempt was denied.

Reinstatement restores allowed access immediately. Closed accounts cannot be reinstated through this operation. Account closure is described in [Owner](#).

Inspect a business

Where: **Owners** → **owner name** → **Businesses** → **business name**.

1. Review the **Branches** table for branch names, codes and addresses.
2. Review **Activity** to trace business events. Use the page controls to view additional entries.
3. Choose **Browse catalog, sales, payments and operations** → to open **Business data**.
4. Select the section you need.
5. Use pagination to inspect additional records.
6. Expand **View details** or **View ... items** for a nested record, such as variants or count items.

Inspector section	Typical records
Catalog	Product name, SKU, prices, cost, active/stock flags and variants
Sales	Receipt, branch, time, status and total
Payments	Sale, method and amount
Shifts	Branch/terminal, opening/closing times and cash amounts
Stock	Branch/product/variant quantities
Counts	Count status, time, notes and items
Terminals	Branch, name, code, last-seen time and pairing state

Money in this inspector is shown in integer centavos. For example, **12500** means **₱125.00**. Other owner and POS screens generally format money in pesos.

Inspection is read-only. If a product, stock balance, receipt setting or branch needs changing, the business owner must do it through their own portal. Platform inspection does not impersonate a cashier or owner.

Review platform metrics

Where: platform navigation → **Metrics**.

Review the totals for **Owners**, **Businesses**, **Branches**, **Terminals** and **Open shifts**, then the owner access counts: active, suspended, hard suspended and closed.

Use these as platform-wide counts. Business sales, profit and tax analysis are in the owner/manager reporting surfaces, not this metrics screen.

Recover access and end a session

Use an unused recovery code if your authenticator is unavailable. Password recovery requires email delivery and still does not remove the two-factor requirement. See [Accounts and access](#).

Choose **Sign out** when finished. CMS content is managed through the separate [CMS guide](#), with a separate account.

Next: [owner guide](#) →

Owner guide

As an owner, you manage the businesses on your account, their products, branches, staff and terminals. You can see sales, profit and stock reports across your businesses. Each business has its own catalog and settings; each branch has its own stock and terminals.

This chapter starts after your account is activated. For invitations, signing in, account security and staff administration, use [Accounts and access](#). For selling, pairing a device and closing the drawer, use [POS terminal](#). Staff can use the [Manager guide](#) or [Cashier guide](#).

Find a task

- [First setup checklist](#)
- [Find your way around](#)
- [Create or change a business](#)
- [Create or change branches](#)
- [Organize categories](#)
- [Add and manage products](#)
- [Set up modifiers](#)
- [Set up discounts](#)
- [Manage branch stock](#)
- [Read analytics](#)
- [Change business settings and receipts](#)
- [Set your owner terminal PIN](#)
- [Manage terminals](#)
- [Read notifications and activity](#)
- [Reset the demo business](#)
- [Export account data or close your account](#)
- [Common problems](#)

First setup checklist

After signing in to the [owner portal](#):

1. Open **Businesses**, choose **Create business**, and enter its name, business type, VAT rate and business-day start time.
2. Add at least one **Branch**. Choose its permanent receipt code carefully.
3. Add **Categories**, then **Products**, including variants where needed.
4. For tracked products, receive the starting stock into each branch. Enter expiry dates for products with **Track expiry** enabled.
5. Add reusable **Modifiers** and **Discounts** where needed. Link modifier groups to the products that use them.

6. Review the business's **Settings**: charges, receipts, business-day cutoff, miscellaneous items and drawer closing.
7. In account **Settings**, set your six-digit **Owner terminal PIN**.
8. Set up **Staff** using [Accounts and access](#), then pair devices using [POS terminal](#).
9. Make a training sale in the demo business and check its receipt and analytics. Choose the demo business explicitly in analytics to see its reports.

Result: Your business is ready for a cashier to open a shift and sell. The demo is kept separate from the default reports for your real businesses.

Find your way around

The main portal contains **Dashboard**, **Businesses**, **Analytics**, **Notifications** and account **Settings**. The Dashboard page is headed **Today**. Opening a business gives you its own menu:

Menu	What it is for
Overview	Product and branch counts, with links to manage them.
Products	Prices, costs, variants, barcodes, availability and product images.
Categories	The groups and tab order shown on the terminal.
Modifiers	Reusable choices such as milk, toppings or extras.
Discounts	Named percentage or fixed-amount discounts.
Branches	Branch details and each branch's stock.
Terminals	Paired tills, last-seen times and unpairing.
Activity	A record of changes and terminal actions in this business.
Staff	Managers and cashiers; see Accounts and access .
Settings	This business's charges, day, receipt and stock settings.
Notifications	Account alerts.
← All businesses	Return to the account dashboard.

When you have two or more businesses, the **Business** selector lets you change business while staying in the same main section. Always check the business name before saving.

Check today's dashboard

Before you start: A real business needs a branch and sales before its figures become useful.

1. Open **Dashboard**, or choose ← **All businesses** from a business menu.
2. Read each business's **Sales**, **Gross profit** and **Transactions** alongside the same day last week. The small chart shows the last seven days; branch rows show sales and sale counts.
3. Select a low-stock badge to open Inventory analytics, or an open-shift badge to jump to **Right now**.

4. In **Right now**, check open shifts, paired terminals, last-seen times and unread notifications. Choose **Open analytics** for a fuller report.

Result: You have an account-wide view of trading and items needing attention. Demo trading is excluded. Dashboard shift badges flag shifts open over 24 hours; notification alerts can also flag a shift left open across the business-day cutoff.

Create or change a business

Create a business

Before you start: Have the business name, type, VAT rate and reporting cutoff ready. Your account has a business limit set by the platform administrator; the demo does not use that limit.

1. Open **Businesses** → **Create business**.
2. Enter **Business name** and choose **Retail**, **Food and drink** or **Mixed**.
3. Enter **VAT rate (%)** as a percentage, for example **12** for 12%. The form accepts **0** to **99.99**.
4. Set **Business day starts at** in Philippine time. With **06:00**, a sale at 2 AM belongs to the previous business day.
5. Choose **Create business**.

Result: The new business uses Philippine pesos and opens the branch setup page. Add a branch before pairing a till. If the business limit is reached, contact your platform administrator.

Edit a business

1. Open **Businesses** and select its name.
2. Open the business's **Settings**.
3. Change the name, type or other settings described under **Business settings**.
4. Choose **Save settings** and wait for **Settings saved**.

Result: The settings apply to this business, including its branches and terminals.

Delete a business

Before you start: Check that you selected the correct business. Download any records you need using **account export**.

1. Open the business's **Settings** → **Delete business**.
2. Type the business name in **Confirm business name**.
3. Choose **Delete business**.

Warning: This removes the business from your account and disables access to its terminals. There is no restore control in the owner portal. This action is separate from closing your whole account.

Create or change branches

Add a branch

Before you start: Create the business first. A branch is the location that owns stock and receives paired terminals.

1. Open the business's **Branches** page.
2. Under **Add a branch**, enter **Branch name**, **Code** and **Address**.
3. Use a code of 2–6 uppercase letters or digits, for example `MKT`.
4. Choose **Add branch**.

Result: The branch appears in the list and can be selected when pairing a terminal. Its code becomes part of receipt numbers, for example `MKT-T1-000318`. The code cannot be changed through this form after creation.

Edit or delete a branch

1. Open **Branches** and find the branch row.
2. Change the name or address and choose **Save**. The code stays read-only.
3. To remove the branch, choose **Delete**, check the displayed branch name, then choose **Confirm delete**. Choose **Cancel** to keep it.

Result: Saved details appear in the row. A deleted branch is removed from the normal branch list; there is no owner-portal restore control. Check its stock and terminals before deleting it.

Use the **Stock** link on a branch row for deliveries and adjustments.

Organize categories

Every product needs a category. Categories group products on the terminal; **Order** controls the category tab order.

Add, edit or delete a category

1. Open the business's **Categories**.
2. Under **Add a category**, enter a **Name** and a whole-number **Order** of zero or higher. Use smaller numbers for categories you want earlier.
3. Choose **Add category**.
4. To rename or reorder an existing category, edit its row and choose **Save**.
5. To remove one, choose **Delete**, check its name and choose **Confirm delete**.

Result: The saved category is available in product forms and controls terminal grouping. Before deleting a category, move any products you want to keep selling into another category. The portal has no category restore control.

Add and manage products

Find products

1. Open the business's **Products**.
2. Use the search and category filter. Search matches product and variant names, SKUs and barcodes.
3. Select a product name to edit it. The list shows its category, base price, tracked-stock status, variant count and **Inactive** status where applicable.

Result: You can locate an item without switching between branches; the catalog belongs to the whole business.

Add a product

Before you start: Add its category. Decide whether it sells by each item or by weight, and whether you need stock or expiry tracking.

1. Choose **Products** → **Add product**.
2. Fill in the details:

Field	What to enter
Name	The name staff will recognize at the counter.
Category	The terminal group for this item.
Sold by	Each or Weight .
Price	The selling price in pesos, including VAT.
Cost	Optional recorded cost in pesos, used for profit reports.
SKU	Optional internal item code.
Barcode	Optional code scanned at the counter.

3. Keep SKUs and barcodes unique within this business, including its variants.
4. Set the behavior:

Setting	Effect
Active	Makes the product available on the terminal. Turning it off hides it while keeping its report history.
Track stock	Counts quantity separately for each branch and prevents selling more than the available stock.
Low-stock alert threshold	Flags stock at or below this quantity. Applies to each variant. Leave blank to disable monitoring; enable Track stock to use alerts.
Track expiry	Records dated stock batches. An expiry date is required when receiving this product.

5. Add variants if needed using the next procedure.
6. Choose **Create product**.

Result: The product's edit page opens with a saved message. Paired terminals pick up catalog changes on their next sync. For tracked items, **receive stock** in each selling branch before use.

Add or edit variants

Use variants for sizes or flavors with their own prices, such as **Small latte ₱100** and **Large latte ₱130**. Modifier prices work differently: they add to or subtract from an item's price.

1. Open the product form and find **Variants**.
2. Choose **Add variant** and enter **Variant**, **Variant price**, and optional **Variant SKU** and **Variant barcode**.
3. Edit existing rows as needed. Choose **Remove** only for a variant you want removed.
4. Review the whole visible list, then choose **Save product** or **Create product**.

Result: The saved list becomes the product's available variants. With no variants, the product sells at its own price. Stock is held separately for each variant.

The variant form does not have a cost field. Owners can record a variant's unit cost while receiving stock. The current product editor clears stored variant costs when it saves the variants; check stock value and profit coverage after editing a product with variants. Historical sales retain the costs recorded at the time of sale.

Edit, hide or remove a product

1. Open its name from **Products**.
2. Change the details, behavior or variant rows, then choose **Save product**.
3. To hide an item temporarily, clear **Active** and save. Switch **Active** back on to offer it again.
4. To remove it, return to the product list, choose **Delete**, check the name and choose **Confirm delete**.

Result: An item that has been sold becomes inactive when deleted so its sales history remains. An unsold item is removed from the normal catalog. Use **Active** when you want a reversible change to availability.

Upload a product image

Before you start: Save the product first. Image storage must be enabled by the platform administrator.

1. Open the product's edit page and find **Product image**.
2. Choose an **Image file**: JPEG, PNG or WebP, no larger than 4 MB.
3. Choose **Upload image** and wait for **Image updated**.
4. To clear it, choose **Remove image**.

Result: The product uses the uploaded image. If the page says uploads are not configured, ask your platform administrator to enable storage.

Set up modifiers

A modifier group is a reusable set of choices. For example, **Milk** could contain **Regular ₱0** and **Oat +₱15**; **Toppings** could offer several extras.

Create or edit a modifier group

1. Open the business's **Modifiers**.

2. Enter **Group name**, **Min** and **Max**. Use whole numbers; Max must be at least Min.
3. Use **Min 0**, **Max 1** for one optional choice, or **Min 1**, **Max 1** to require exactly one choice.
4. Choose **Add option** for each option row. Enter each **Option** name and **Price change** in pesos. A positive value adds to the price; a negative value reduces it.
5. Choose **Create group**. To change a group later, edit its existing rows and choose **Save group** for the complete group.
6. To remove an option, choose its **Remove** button and save. To delete a group, use the group's **Delete** confirmation.

Result: The group is ready to link to products. Creating a group alone does not add it to a product.

Link groups to a product

Before you start: Create the product and modifier groups.

1. Open **Products**, then the product name.
2. Scroll to **Modifiers**.
3. Tick **every group the product should have**, including groups you linked previously.
4. Choose **Save modifiers** in the Modifiers section, separately from **Save product**.

Result: The selected groups become the product's complete modifier list. The current screen opens with all boxes empty even when groups were saved before. Saving replaces the entire list: selecting only a new group removes previous links, and saving with nothing selected removes all groups.

Set up discounts

Named discounts are available at the counter according to their scope. Senior citizen/PWD treatment is a separate checkout flow described in [POS terminal](#).

Add or edit a discount

1. Open the business's **Discounts**.
2. Enter a **Name**, such as "Staff discount".
3. Choose **Percentage** or **Fixed amount**. Enter a whole percentage from **1** to **100**, or a positive peso amount such as **50.00**.
4. Set **Applies to: A line, Whole order, or Either**.
5. Keep **Active** selected to make the discount available, then choose **Add discount**.
6. To change one, edit its row and choose **Save**. Clear **Active** to stop offering it, or use **Delete** → **Confirm delete** to remove it.

Result: Active discounts are offered on eligible line or order discount controls after the terminal updates its catalog.

Manage branch stock

Open **Business** → **Branches** → **Stock** beside the branch. Only products with **Track stock** enabled are available for stock operations. Choose the exact variant where a product has variants. Quantities can use up to three decimal places.

Receive a delivery

Before you start: Add the product, enable stock tracking and select the receiving branch.

1. Under **Receive stock**, choose the product or variant.
2. Enter **Quantity received** above zero. This is the quantity to add, for example **20** , not the new shelf total.
3. Optionally enter **Unit cost** in pesos. Giving a cost replaces the recorded cost for that product or variant; it is not a weighted average of deliveries and is shared across the business's branches.
4. Enter an **Expiry date** if the product tracks expiry. Although the form's hint says optional, the system requires it for expiry-tracked products.
5. Choose **Receive stock** and wait for **Stock received**.

Result: The branch's level increases and a receive entry is recorded. Dated stock creates an expiry batch. Receive separately for each item or variant.

Correct a stock total

Before you start: Count the actual quantity remaining at this branch.

1. Under **Adjust stock**, choose the product or variant.
2. Enter **New count**, the corrected total on the shelf. If the system says 10 and two are damaged, enter **8** , not **-2** .
3. Choose **Damage, Expired, Theft or loss, Count correction** or **Other**, and add a note if useful.
4. Choose **Record adjustment** and wait for **Adjustment recorded**.

Result: Stock becomes the new count and the difference is recorded in the movement ledger. The new total must be zero or greater. Negative adjustments also appear in shrinkage reports.

Transfer stock between branches

Before you start: Have two branches in the same business and enough stock in the source branch.

1. From the source branch's Stock page, choose **Transfers, physical counts and expiry** → .
2. In **Transfer to another branch**, choose **Destination branch**.
3. Enter positive quantities for items to move. Leave all other items blank. Add **Notes** if needed.
4. Choose **Transfer stock** and wait for **Stock transferred**.
5. Review **Transfer history** and the levels at both branches. Choose **Start another transfer** for a separate transfer.

Result: Both branches update together: the source loses the quantity, the destination gains it, and both receive movement entries. Expiry information travels with dated stock. Transfers cannot cross businesses or move more stock than the source has.

If the form reports an uncertain result, keep the original values and use **Retry original operation**. The locked fields preserve the original transfer. Check the history before starting a separate operation.

Save and post a physical count

Before you start: Count the actual items at the branch. A saved draft does not change stock.

1. Open **Transfers, physical counts and expiry** → **New physical count**.

2. Enter each item's physical quantity. Use **0** for an item you counted and found empty; leave an item blank if you did not count it.
3. Add **Notes** and choose **Save draft count**.
4. Find the draft under **Count history**, review it, and correct its quantities if needed. Choose **Save draft count** again to save edits.
5. Check **I have reviewed this saved draft**, then choose **Post saved count**. Posting uses the saved draft; save any edits first.

Warning: Posting replaces current stock for the included items with the physical quantities and cannot be undone. Review the saved quantities before posting, especially if sales or deliveries happened while you were counting.

Result: The count becomes **Posted**. Its table shows the system quantity at posting, the counted quantity and variance. Each included item gets a count-correction movement; blank, uncounted items stay unchanged.

Check expiry and stock history

1. Open **Transfers, physical counts and expiry** → **Expiry batches**.
2. Read the item, expiry date, remaining quantity and status: **Expired**, **Expires today**, or days left.
3. Change **Expiry warning (days)** in business Settings to control how far ahead batches appear.
4. To record spoiled or discarded items, use **Adjust stock** with reason **Expiry** and the new shelf total.
5. For all stock changes, open **Analytics** → **Inventory**, select this business and branch, then review the **Movement ledger**.

Result: You can see remaining dated stock and trace changes. The expiry list shows expired stock and batches due within the warning window. Remaining quantities are estimated by consuming the earliest-expiring stock first; expiry dates do not automatically remove items from stock.

Read analytics

Choose the business, branch and dates

1. Open **Analytics**, or choose **Open analytics** on the dashboard.
2. Select **All businesses** for your real-business totals, or select one business. To inspect training sales, choose the demo explicitly.
3. When a business is selected, choose **All branches** or one **Branch**.
4. Choose **Today**, **Yesterday**, **Last 7 days**, **Last 30 days** or **This month**, or enter **From** and **To** dates. Both dates are included; the maximum range is 366 days.
5. Select **Overview**, **Sales**, **Products**, **Profit**, **Leaks**, **Inventory** or **Tax**. Business, branch and dates carry across tabs.

Result: Reports show only the chosen scope. The seven- and thirty-day presets include today; This month runs from the first of the month through today. A selected business's day-start setting determines its reporting boundaries in Manila time. In all-business reports, each business uses its own cutoff.

Changing businesses clears the branch selection. An empty report usually means no matching sales or movements; check the scope and dates before changing records.

Overview: understand the figures

After choosing your scope, open **Overview**. Cards compare the selected period with the immediately preceding period of the same length.

Figure	Meaning
Gross sales	Item subtotal for sales currently marked completed, before discounts.
Discounts given	Discounts on completed sales, including SC/PWD discounts.
Net sales	Gross sales minus discounts. Service charge is shown separately.
Gross profit	Sales revenue less recorded item costs, covering only items with known costs.
Margin	Gross profit as a percentage of the revenue with known costs. Its change is shown in percentage points.
Transactions	Number of completed sales.
Average basket	Net sales divided by completed transactions.
Service charge	Service charge on completed sales.
Voids / refunds	Counts of sales currently marked voided or refunded.

Result: You can compare trading without confusing sales with profit. The note below the cards identifies sales covered by known costs and sales with unknown costs. A dash means unavailable, not zero. Voided and refunded sales are excluded from completed-sale totals; reports follow the sale's original business-day timestamp.

Sales: find busy days and trading patterns

1. Open **Sales** with your desired scope.
2. In **Which days feed us**, select a calendar day to narrow the report to that day and jump to the breakdowns.
3. In **Trend**, choose **Day**, **Week** or **Month**.
4. Compare net sales and gross profit over time, then **Hour of day**, **Day of week**, **Payment method**, **Order type** and **Branch**.

Result: You can see when sales happen and which branches, payment methods and order types contribute. Gross-profit points without recorded costs are omitted from the Sales profit chart.

Products: compare top sellers and slow movers

1. Open **Products** and choose **By units** or **By revenue**.
2. Review **Top sellers**, **By category**, **Slow movers** and **Sold nothing at all**.
3. Select a product name in the sold-product tables to open its detail report.
4. Read **Revenue over time** and its period table: units, revenue, gross profit and margin. Choose ← **Products** to return.

Result: You can compare products and inspect a product's trend. Products with no sales are listed separately. Miscellaneous items are excluded from product figures and shown in Leaks, so product revenue can differ from net sales.

Profit: compare known margins

1. Open **Profit**.
2. Review **Gross profit over time**, **By product** and **By category**.
3. Compare revenue, cost, gross profit and margin, then check the note showing how much revenue has a recorded cost.

Result: You can identify margin differences among costed products. Unknown costs are not assumed to be free. A chart can plot zero for a period with no known profit; use the displayed cost-coverage note and tables to distinguish that from an actual zero-profit result. There is currently no direct CSV download control on this tab.

Leaks: review discounts, corrections and drawer differences

1. Open **Leaks**.
2. Review **Order-level discounts**, **SC/PWD discounts**, **Misc rings** and **Voids / refunds**.
3. Read **Discounts by name** for frequency and amount, then the void/refund reason tables.
4. Review **Drawer over / short** for closed shifts: expected cash, counted cash and variance.

Result: You can investigate discounts, open-price items and transaction corrections. Drawer variance is counted cash minus expected cash: positive means over; negative means short. A drawer row appears only after a shift closes.

Inventory: review levels, loss and movements

1. Open **Inventory** and choose the business and branch you need.
2. Read **Stock on hand**: quantity, recorded unit cost, value and estimated **Days of stock**.
3. Review **Shrinkage by reason** for negative stock adjustments, their cost value and any units without recorded cost.
4. In **Movement ledger**, choose **Movement type** and, after selecting a business, **Product**. Choose **Apply filters**.
5. Read the change, reason and who performed the action; use pagination for older entries.

Result: You can trace receive, sale, void, refund, adjustment, transfer-in and transfer-out entries. Positive changes add stock; negative changes remove it. **Stock on hand is current stock**, not a snapshot of the selected end date. Dates determine movement/shrinkage records and the selling rate used for Days of stock.

Value is current quantity multiplied by recorded unit cost. Missing costs leave value unknown and are counted below the table. Days of stock is current quantity divided by average daily units sold in the selected range; a dash means the item had no sales in that range. A low badge means quantity is at or below its configured threshold.

If you reach a message asking you to narrow the scope, reduce the dates or select a branch/product. The movement viewer limits how far it can page through a large result.

Tax: review the VAT summary

1. Open **Tax** and choose the reporting dates and scope.
2. Review each business's tax rate, **VATable sales**, **VAT**, **VAT-exempt sales**, **SC/PWD discounts** and **Service charge**.
3. Use the totals row for amounts across the chosen businesses. It does not show a blended tax rate.
4. Choose **Download CSV** to share the summary with the person preparing your accounts.

Result: You have a VAT summary for matching completed sales. Changing business settings does not rewrite historical sale amounts.

Download analytics CSV files

Before you start: Set the business, branch, dates and any report-specific filters first. CSV files can be opened in a spreadsheet application.

1. Open the tab for the report you want.
2. Check the displayed scope and filters.
3. Choose its download link and save the file.
4. Check the file's report name, dates and contents before sharing it.

Tab	Available download controls
Overview	Download CSV for overview figures.
Sales	Trend, patterns, breakdowns and daily sales CSVs. Trend follows the Day/Week/Month choice.
Products	Download CSV for top products and category figures, following By units/By revenue.
Leaks	Download CSV for discount, void/refund and drawer figures.
Inventory	Movements CSV, shrinkage CSV and stock-on-hand CSV. Movement type/product filters carry into movements export.
Tax	Download CSV for the VAT summary.
Profit and product detail	No direct download control is currently shown.

Current movement-export limit: The portal's **Download movements CSV** contains the first 50 matching movements, even if you are viewing a later page. Narrow the dates and filters to keep the result within 50 rows, or use [account export](#) for a broader data copy. It is not a download of the entire paginated ledger.

Reports use pesos for monetary CSV amounts. Some downloads contain several labeled sections rather than one flat table. Movement CSV timestamps use an ISO date/time with a timezone; on-screen activity times are displayed in Manila time. Keep barcodes and SKUs as text when opening exported catalog data so leading zeroes are retained.

Change business settings and receipts

Before you start: Open the correct business. These settings apply to its branches and terminals; account PIN and closure controls are in the main account Settings.

1. Open the business's **Settings**.
2. Update the options you need:

Setting	What it changes
Blind drawer close	Hides expected cash and cash totals until the operator submits their count. Applies to every terminal in this business.

Setting	What it changes
Daily summary email	Saves whether to email the account address after this business day closes. Unavailable for demo businesses.
Name / Type	The business name and Retail/Food and drink/Mixed classification.
VAT rate (%)	VAT breakdown for VAT-inclusive prices. Enter <code>0 – 99.99</code> .
Service charge (%)	The charge rate for the business. Enter <code>0 – 99.99</code> .
Allow miscellaneous items	Allows cashiers to ring an ad-hoc item that is absent from the catalog.
Day starts at	Reporting cutoff in 24-hour Manila time, such as <code>06:00</code> . Earlier sales count toward the previous business day.
Expiry warning (days)	How far ahead remaining expiry batches are flagged; a whole number from <code>0</code> to <code>365</code> .
Receipt Header / Footer	The business text shown on receipts.

3. Choose **Save settings** and wait for **Settings saved**.
4. For branding, use **Receipt logo**, choose a JPEG, PNG or WebP up to 4 MB, then **Upload image**. Use **Remove image** to clear it.
5. Let the terminal update its settings and check a receipt using **POS terminal**.

Result: The saved business settings apply when terminals next load them. Receipt configuration uses your business's branding.

Current email availability: Production email delivery is deliberately disabled. You can save the Daily summary email preference, but enabling it does not currently deliver an email. Use the dashboard and analytics to review daily trading. When delivery is enabled, the summary is intended for the account email after the business-day cutoff and includes branch trading, known-cost profit, uncoded revenue, charges, void/refund counts and closed-shift drawer variance.

Image controls show a storage-configuration message if uploads are unavailable; contact your platform administrator in that case.

Set your owner terminal PIN

Your owner PIN unlocks your terminals and authorizes your actions. Enter it yourself when approving a cashier's void, refund or stock adjustment. Staff use their own PINs.

1. Return to the account menu and open **Settings** → **Owner terminal PIN**.
2. Enter exactly six digits in **New refund PIN** and repeat them in **Confirm PIN**. The field still uses the older refund-PIN label.
3. Choose **Set refund PIN** and wait for the success message.

Result: Your personal terminal PIN is set or replaced across the account. It is not shown again. Four wrong attempts lock that person's PIN for five minutes. Keep your PIN private; staff setup is covered in **Accounts and access**.

Manage terminals

View or pair a terminal

1. Open the business's **Terminals**.
2. Check each terminal's name, code, branch, **Last seen** and **Paired / Not paired** status.
3. To connect a new device, follow [Pairing in POS terminal](#). Pairing is performed in the terminal app, not by adding a row on this page.

Result: You can check which tills belong to the business. Last seen is the most recently recorded contact; it does not prove a device is currently connected.

Unpair a device

Before you start: Identify the device by its terminal code and branch.

1. Choose **Unpair** on its row.
2. Read the displayed consequence and type the **Terminal code**.
3. Choose **Unpair terminal**, or choose **Cancel**.

Warning: The device stops working immediately and must be paired again in person. Do this only for the intended till.

Result: The row shows **Not paired**. Unpairing does not create a new shift or complete a drawer close.

Read notifications and activity

Follow up notifications

1. Open **Notifications**, or use the notification bell on the Dashboard page.
2. Choose **All** or **Unread** and check the unread count.
3. Read the alert and choose **View details** → to open the relevant stock, expiry, terminal or inventory view.
4. Use **Mark read** for an individual alert or **Mark all read** for all unread alerts. Use pagination for older alerts.

Result: You can follow up low stock, stock nearing expiry and shifts left open after a business day ends. A **Resolved** label indicates that the alert condition has cleared. Marking an alert read changes its unread status; it does not correct stock or close a shift. Demo businesses are excluded from the alert jobs.

Review business activity

1. Open a business's **Activity**.
2. Filter **Actor** by Anyone, Owner or Terminal; choose a **Branch** if useful.
3. To find a particular action, copy its action text from an entry into **Action**; leave blank for all actions.
4. Choose **Apply** and use pagination to review more entries.

Result: You can trace changes and terminal actions in this business. Times are Manila time. Entries can include actions on records that were later removed; the page is an activity record, not a control to reverse changes.

Reset the demo business

Before you start: Select the business marked **demo**. A real business cannot use this reset.

1. Open its **Settings** → **Reset demo business**.
2. Type **RESET DEMO** exactly.
3. Choose **Reset demo**.

Warning: The old demo and its training changes are replaced with a fresh training business. Its terminals must be paired again. There is no undo control.

Result: The portal opens the fresh demo business. Your real businesses are unaffected.

Export account data or close your account

Download an account export

1. Open main account **Settings** → **Export data and close account**.
2. Choose **Download account export (ZIP)**.
3. Save the ZIP, open it and check the CSV files before relying on it.

Result: You have an account-wide data copy, separate from analytics date/branch filters. It includes account and user records, businesses and branches, catalog data, sales and payments, shifts, stock records, notifications and activity. Passwords and authentication tokens are not a part of the export. Keep the files somewhere you can still access if the account closes.

Close your account

Before you start: Download and check a fresh account export in the same browser. The system requires an export from the last 24 hours before allowing closure.

1. Open main account **Settings** → **Export data and close account**.
2. Type **CLOSE MY ACCOUNT** exactly.
3. Choose **Close my account**.

Warning: Closure immediately ends account access and access for paired terminals. Account data is retained for 90 days before scheduled deletion. The portal provides no self-service reopen control.

Result: Your session ends and the Account closed page shows the scheduled deletion date. Keep the downloaded export. Downloading an export by itself does not close your account.

Common problems

What you see	What to do
Business limit reached	Ask your platform administrator about the account limit. The demo does not count toward it.
No products available for stock operations	Open the correct business and enable Track stock on the product.

What you see	What to do
Receiving an expiry-tracked product fails	Enter its expiry date as well as a positive quantity.
A tracked item cannot be sold	Check this branch's stock for the exact variant; receive or correct stock as appropriate.
A barcode or SKU is already used	Check products and variants in the same business and assign a different code.
A product is missing from the terminal	Check Active, category and variant setup, then let the terminal update its catalog.
Modifier boxes are empty after reopening a product	Select all intended groups before saving; the current editor does not show prior selections.
Profit or stock value shows a dash	The relevant cost is unknown. Review product costs and variant receiving costs.
Analytics looks empty	Check business, branch and dates. Select the demo explicitly for training results.
Movement CSV has fewer rows than the ledger	It currently exports the first 50 matching rows. Narrow filters or use account ZIP export.
A transfer or draft-count submission has an uncertain result	Use Retry original operation with the preserved values, then review history.
An image upload is unavailable	The platform administrator must enable image storage.
Daily summary email does not arrive	Production delivery is currently disabled; review Dashboard and Analytics.
Account closure requests an export	Download a fresh ZIP in the same browser, check it, and retry within 24 hours.

[Back to Accounts and access](#) · [Manager guide](#) · [Cashier guide](#) · [POS terminal](#)

Manager guide

[Guide home](#) · [Accounts and access](#) · [POS terminal guide](#) · [Cashier guide](#)

A manager uses the portal to oversee assigned branches and the POS terminal to serve customers or approve cashier actions. Your business owner creates your account and chooses your branches. Your access belongs to one business.

Use your **email and portal password** in the [portal](#). Use your **personal six-digit terminal PIN** at an assigned POS terminal.

Find a task

- [Start using your manager account](#)
- [Sign in and navigate the portal](#)
- [Review sales and reports](#)
- [Manage branch stock](#)
- [Check products, terminals, activity and alerts](#)
- [Use the POS and approve cashier actions](#)
- [Recover access or change credentials](#)
- [Common problems](#)

Start using your manager account

Current service limitation: automatic emails are turned off in the current deployment. New manager setup and manager credential resets depend on emailed temporary PINs, which are not shown to the owner. The screen may say a PIN was emailed even though no email is delivered. Ask your business owner to arrange restored email delivery with Sentry support before starting setup or resetting a working account. A fresh PIN must then be issued. An already activated manager can continue to sign in with existing credentials.

When email delivery is available:

1. Ask your owner to add you as a **Manager**, using your correct email address and at least one assigned branch. The owner's staff list initially shows **pending**.
2. Open the setup link in your email, or the [manager setup page](#).
3. Enter the same email address your owner used and the emailed **Temporary PIN**.
4. Enter a **New portal password** of at least eight characters, then enter it again in **Confirm password**.
5. Choose a **New terminal PIN** of six digits. It must differ from the temporary PIN. Enter it again in **Confirm terminal PIN**.
6. Select **Set up access and sign in**. Successful setup activates your account and opens the manager dashboard.
7. At an assigned, paired terminal, choose your name and enter your new terminal PIN. Follow the [POS terminal guide](#) to open your own shift and start selling.

Temporary PINs expire after 15 minutes, work once, and stop working after five incorrect attempts. If yours is expired, used or replaced, ask the owner for a fresh setup email. Use the newest PIN.

Sign in and navigate the portal

1. Open [portal sign-in](#).
2. Enter your email address and portal password, then select **Sign in**.
3. Check the business name and your manager identity. The dashboard covers your assigned branches.
4. Choose a section from the navigation. On a small screen, the navigation appears above the main content.
5. Use **Sign out** when you finish on a shared device.

Section	What you can do
Dashboard	See today's sales and transaction count, and open stock management for an assigned branch.
Analytics	Review Overview, Sales, Products, Inventory and Tax reports; download available CSV files.
Stock	View quantities; receive, adjust and transfer stock; save and post physical counts; review transfers and expiry batches.
Products	Check product or variant names, SKUs, selling prices and active/inactive status.
Terminals	Check assigned terminals' status and last seen time; remotely unpair a device.
Activity	Review recorded operational actions in assigned branches, with pages of results.
Alerts	Read unresolved low-stock alerts for assigned branches.

Your owner controls branch assignments. Selecting **All assigned branches** in a report combines only the branches you are allowed to see. You cannot select another business, inspect unassigned branches, edit the catalog or prices, change business/account settings, manage staff, or view cost, inventory value, profit or margin figures. The **Profit** and **Leaks** report tabs are unavailable to managers.

Review sales and reports

Choose the branches and reporting dates

1. Select **Analytics**.
2. Keep the displayed business. Your manager account cannot change it.
3. Under **Branch**, choose one assigned branch or **All assigned branches**.
4. Choose a **Range**, or set **From** and **To** dates.
5. Select a report tab. Branch and date selections carry across the tabs.

Dates use the business's configured business day. A business day may begin at a time other than midnight. Activity times are displayed in Manila time.

Read each report

Report	What to review	Available actions
Overview	Gross sales, discounts, net sales, transactions, average basket, service charge, and void/refund counts; comparisons with the previous period.	Change the branch/date range; select Download CSV .
Sales	Daily sales calendar, net sales trend, sales by hour and weekday, payment method, order type and branch.	Select a calendar day to inspect it; choose Day , Week or Month for the trend; download trend, patterns, breakdowns or daily sales CSV.
Products	Top sellers, category totals, slow movers and active products with no sales in the selected period.	Choose By units or By revenue ; open a product to see its units and revenue over time; return with ← Products ; download CSV.
Inventory	Current stock on hand, estimated days of stock, units lost by adjustment reason, and the stock movement ledger.	Filter the ledger by Movement type and Product , then select Apply filters ; move between result pages; download movements, shrinkage or stock-on-hand CSV.
Tax	Recorded VATable sales, VAT, VAT-exempt sales, SC/PWD discounts and service charge.	Change the branch/date range; select Download CSV .

The portal's **Products** menu is a catalog list. The **Products** tab inside Analytics is a sales performance report.

Miscellaneous/open-price sale lines are excluded from product rankings, so product revenue can differ from total net sales. Inventory reports show current on-hand quantities; their movement and loss sections use the chosen reporting period. A dash in days of stock means a usable estimate is unavailable, such as when there were no sales in the selected period.

Download a report

1. Open the report and confirm the branch and date range.
2. Select the report's **Download CSV** link. Sales and Inventory offer separate downloads for their different views.
3. Open the downloaded file in your spreadsheet application. Manager downloads carry the same branch and financial-information restrictions as the screen.

Movement export limit: Download movements CSV includes the first 50 filtered movements, even when you are on a later ledger page. Narrow the dates/filters to keep the result within 50 rows; ask the owner for an account export if a broader data copy is needed. 4. If the session has ended, sign in again and repeat the download from the report.

Manage branch stock

Select **Stock**, then select the branch name at the top. Check the **Stock — [branch]** heading before changing quantities. Only stock-tracked products and their variants appear in the item choices. Ask your owner to configure a missing item or variant.

Quantities support up to three decimal places. Choose the exact variant when an item has variants.

Receive a delivery

1. In **Receive stock**, choose the product or variant.
2. Enter **Quantity received**: the amount being added to existing stock.
3. Enter **Expiry date** if the product tracks expiry. An expiry-tracked product requires this date even though the field is labelled optional for other products.
4. Select **Receive stock**.
5. Wait for **Stock received**. and check the updated level. Repeat for another item as needed.

Managers cannot enter or change unit costs. Give cost information to the owner.

Correct a stock level

1. Physically check the item in the selected branch.
2. In **Adjust stock**, choose the product or variant.
3. Enter **New count**: the corrected total quantity. For example, if the screen says 10 but you count 8, enter **8**.
4. Choose **Damage**, **Expired**, **Theft or loss**, **Count correction** or **Other** as the reason. Add an optional note explaining the change.
5. Select **Record adjustment**.
6. Wait for **Adjustment recorded**. and check the new level. Review the movement ledger in Analytics → Inventory when you need the recorded change.

Transfer stock to another branch

1. Select the source branch in **Stock**. You must be assigned to this source branch.
2. In **Transfer stock**, choose a different **Destination branch** of the same business.
3. Enter the quantity to move beside each item. Leave other items blank. Add **Notes** if useful.
4. Select **Transfer stock**.
5. Wait for **Stock transferred**. Both branches update together. Check the **Transfers** table for the time, source, destination and items.
6. Use **Start another transfer** when you need to record a separate transfer.

The destination list can include branches you are not assigned to. Choosing one allows the transfer, but does not let you browse that branch's inventory, sales or other data. A transfer requires enough stock at the source.

Save and post a physical count

1. In **New physical count**, enter the actual quantity for every item you counted. Enter **0** for an item you counted and found none of. Leave an item blank if you did not count it.
2. Add **Notes**, then select **Save draft count**. Saving a draft does not change stock.
3. Find the **Draft** in **Count history**. Review the saved quantities. Correct them and select **Save draft count** if needed; wait for **Draft updated**.
4. Check **I have reviewed this saved draft** only after reviewing it. Posting replaces current quantities for the counted items and cannot be undone through the count form.
5. Select **Post saved count**.
6. Check that the entry is **Posted** and review its **Counted** quantities and **Variance**.

Review expiry batches

1. Select the branch in **Stock**.
2. Read **Expiry batches** for the item, remaining quantity, expiry date and days left.
3. Follow your business's stock handling process for items approaching or past expiry.
4. If stock is discarded, record the resulting quantity in **Adjust stock** with **Expired** as the reason.

Handle an uncertain stock submission

If a transfer or draft-count form shows **Retry original operation**, keep its original values and use that button after connectivity returns. The form freezes the submitted details for the retry. Check history before starting a separate operation if you have reloaded or left the page.

For a receive or adjustment whose result is unclear, check the stock level and movement ledger before entering it again. Escalate to the owner with the branch, item, quantity, approximate time and displayed error reference.

Check products, terminals, activity and alerts

Check a product or price

1. Select **Products** in the portal menu.
2. Locate the product or variant and check its SKU, selling price and status.
3. Send any required name, category, price or availability change to your owner. This page is read-only.

Check or remotely unpair a terminal

1. Select **Terminals**.
2. Check the device's name/code, branch, **Last seen** and **Paired** status.
3. If the device needs to be disconnected, select **Unpair** on the correct row.
4. Read the confirmation, type the displayed **Terminal code**, then select **Unpair terminal**. Select **Cancel** to leave it paired.
5. The device loses access immediately. Arrange for the owner to pair it again in person before staff can use it.

Managers can unpair assigned devices from the portal. Pairing a new device, or using **Unpair...** in the terminal's Settings screen, requires owner sign-in.

Review recorded activity

1. Select **Activity** in the portal.
2. Review **When**, **Actor**, **Action** and **Entity**.
3. Use the page controls to review older results.
4. Give the owner the relevant time and action when investigating a discrepancy. This page displays recorded actions; it does not undo them.

On the POS, **Activity** shows sales and drawers for the paired branch, with the latest 100 of each. Drawer variance is shown after closing. Use **Refresh** to reload this view.

Respond to a low-stock alert

1. Select **Alerts**.
2. Read the item, branch, remaining quantity and threshold in the alert.
3. Check that branch's stock and arrange a delivery, transfer or count correction as appropriate.
4. If thresholds or stock tracking need changing, contact the owner. The manager alert page has no manual dismiss or threshold-edit control.

Use the POS and approve cashier actions

Unlock and lock your terminal

1. Open the [POS terminal](#) on an assigned, paired device.
2. At **Unlock this terminal**, check the branch, choose your name, enter **Your PIN**, and select **Unlock terminal**.
3. If no shift is open, follow the [shift-opening procedure](#). If your own drawer is open, the terminal resumes it. An unresolved payment opens for resolution before further selling.
4. Select **Lock** when stepping away. Unlock again with your own PIN when you return.

Locking keeps the cart, unresolved payment and open drawer intact. Reloading requires your PIN again. The terminal also locks after five minutes without user input and requires a new unlock when the operator session reaches 12 hours.

An open drawer belongs to the person who opened it. You cannot sign in over another active operator's drawer, even as a manager. The original operator must close the shift before another person opens a new one. See [shift handover and emergency closing](#).

Approve a cashier's sensitive action

Cashiers need an assigned manager or owner to approve a void, refund or terminal stock adjustment.

1. Review the cashier's proposed action, item/sale and reason in person.
2. In **Manager or owner approval**, select your name under **Approver**.
3. Enter your own six-digit **Approver PIN** yourself.
4. Have the cashier complete that action using its confirmation button.
5. Verify the result. Approval applies to that action and leaves the drawer with the cashier.

You must have active access to the terminal's branch. Another cashier cannot approve. A pending manager who has not completed setup cannot approve.

Know your POS permissions

Task	Manager	Cashier
Sell, hold/resume a cart, apply configured discounts and record eligible misc items	Allowed	Allowed
Enter a free-form discount amount or percentage	Unavailable	Unavailable

Task	Manager	Cashier
Open/close own shift, record cash movements, print/reprint receipts	Allowed	Allowed
Void an eligible sale	Allowed; normal sale/shift rules still apply	Manager/owner approval required
Refund an eligible sale	Re-enter your own PIN	Manager/owner approval required
Adjust stock at the terminal	Allowed	Manager/owner approval required
POS activity	Branch sales and drawers	Own sales and drawers in this branch
Portal access	Assigned business/branches, within manager limits	Unavailable

Follow the [POS terminal guide](#) for selling, payments, receipts, history, voids, refunds, stock and shift procedures. Business settings may further control which sale options are available.

Recover access or change credentials

Ask the owner to reset your terminal PIN

1. Ask the owner to use **Reset terminal PIN** on your staff record. Complete your own open shift first when possible.
2. Your staff access becomes **pending**, and existing sessions end.
3. When email delivery is available, use the fresh emailed temporary PIN at an assigned terminal: select your name, enter **Temporary PIN**, enter a different **New terminal PIN** twice, then select **Set PIN and unlock**.
4. Sign in to the portal again with your existing portal password after the reset is complete.

If your manager setup was incomplete, the owner's reset may require the full manager setup page with both a new password and terminal PIN. Follow the newest email's instructions.

Ask the owner to reset your portal password

1. Ask the owner to use **Reset portal password** on your staff record.
2. Your staff access becomes **pending**, and existing sessions end.
3. When email delivery is available, open the reset email's link to [Change your portal password](#).
4. Enter your email, fresh temporary PIN, new password of at least eight characters and its confirmation.
5. Select **Change password and sign in**. The password-only reset keeps your existing terminal PIN.

Use Forgot password for an already active manager account

When email delivery is available, an already active manager can also select **Forgot password** on the sign-in screen, request the link for their account email, open it within one hour, and save a new password. Sign in again afterward. This changes the portal password; it does not activate a pending/deactivated staff account or replace a terminal PIN.

While emails are disabled, both emailed recovery routes require escalation through your owner. Repeated requests will not produce a usable email or reveal the PIN to the owner.

Understand changes made by your owner

Staff status/change	What it means for you
Pending	First setup or a credential reset needs completion. Normal staff access is paused.
Active	Setup is complete; you can use your assigned access.
Deactivated	Access is removed. Ask the owner if reactivation is appropriate.
Branch or email changed	Existing sessions end. Sign in/unlock again; the owner controls your available branches.
Role changed	Both credentials are cleared. Complete fresh setup for the new role.
Reactivated	Existing complete credentials can be used again. If credentials are incomplete, fresh setup is required.

Common problems

What you see	What to do
No setup or reset email	Check the current email limitation above. Ask the owner to arrange restored delivery and then issue a fresh PIN.
Temporary PIN rejected	Check your email/name and use the newest PIN. It may be expired, already used, replaced or exhausted after five incorrect attempts. Ask for a fresh one.
Sign-in or personal PIN locked	Four failed attempts trigger a five-minute lock. Wait for the displayed retry period, then enter the correct credential. Ask the owner for a reset if you do not know it.
Your name is missing from the terminal	Check the terminal's branch. Ask the owner to check your role, assignment and active/pending status. New manager setup must be completed in the portal first.
Another person's drawer is open	The original operator must resume and close it. Escalate if that person's access has been removed; follow the terminal guide's emergency-close procedure.
Access ended after an owner change	Sign in/unlock again. Ask the owner to confirm the current role, branch assignments and status if access remains denied.
A branch or report is unavailable	Confirm that it is assigned to you. Profit, costs, settings and staff management require the owner.
An item is missing from stock forms	Ask the owner to check product/variant setup and stock tracking.
Transfer says insufficient source stock	Check the source branch and quantity; receive or correct stock only after verifying what is physically available.
Count was posted incorrectly	Contact the owner with the count time, items and quantities. Posted counts have no undo button; any correction must be recorded as a new operation.

What you see	What to do
API or connection error	Check connectivity. Preserve an uncertain transfer/count for Retry original operation . Give the owner the displayed error reference if the issue continues.

For escalation, provide the business, branch, terminal code if relevant, action, approximate time and displayed error/reference. Do not send passwords or PINs.

Cashier guide

[Guide home](#) · [Accounts and access](#) · [POS terminal guide](#) · [Manager guide](#)

A cashier works at POS terminals in branches assigned by the business owner. You use your own name and personal six-digit PIN. Your sales and drawer activity are recorded under your identity.

Open the [POS terminal](#). Cashiers do not sign in to the management portal, even when the owner has recorded an email address for them.

Find a task

- [Start using your cashier account](#)
- [Unlock, lock and hand over the terminal](#)
- [Follow the daily cashier workflow](#)
- [Get approval for a sensitive action](#)
- [Know what your role can do](#)
- [Review your activity](#)
- [Change or recover your PIN](#)
- [Common problems](#)

Start using your cashier account

1. Ask the business owner to add you as a **Cashier** and assign the branches where you work. An email address is optional.
2. Receive your six-digit **temporary PIN** privately from the owner. It is displayed once on the owner's screen after creation or reset. Cashier setup does not depend on email delivery.
3. Go to an assigned, paired terminal. Check the branch shown on **Unlock this terminal**.
4. Choose your own name.
5. Enter **Temporary PIN**.
6. Choose a different six-digit **New terminal PIN** and enter it again in **Confirm terminal PIN**.
7. Select **Set PIN and unlock**. This activates your access and unlocks the terminal.
8. Follow the [POS terminal guide](#) to open your own shift and serve your first customer.

Temporary PINs expire after 15 minutes, work once, and stop working after five incorrect attempts. A new PIN from the owner replaces the previous one. If setup fails, ask the owner for **Issue fresh setup PIN** or a terminal PIN reset.

If the terminal already has an open drawer for another person, that person must close their shift before you start. Choose your own name for every shift and use only your own personal PIN.

Unlock, lock and hand over the terminal

Unlock for your next shift or return from a break

1. Open the [POS terminal](#) on the paired device.
2. Check the branch, choose your name, enter **Your PIN**, and select **Unlock terminal**.
3. If you have an open drawer, the terminal resumes it. If no drawer is open, open a shift as described in the terminal guide.
4. If an unresolved payment appears, resolve it before starting another sale, using the terminal guide.

Lock when stepping away

1. Select **Lock** in the top bar.
2. On return, choose your name and unlock with your personal PIN.

Locking keeps the cart, unresolved payment and drawer intact. Reloading the page requires your PIN again. The terminal also locks after five minutes without user input and requires a fresh unlock after a 12-hour operator session.

Hand over to another cashier

1. Finish or resolve the current sale/payment.
2. Close your own shift and count the drawer using the [shift-closing procedure](#).
3. Lock the terminal.
4. The next operator chooses their own name, enters their PIN and opens a new shift.

An open drawer belongs to the person who opened it. Another cashier, manager or owner cannot simply unlock as themselves to take it over. A manager's approval of an action also leaves the drawer under your name. If the original operator's access has been removed, contact the manager or owner for the terminal guide's emergency-close procedure.

Follow the daily cashier workflow

Use the [POS terminal guide](#) for the detailed screen-by-screen procedures.

Point in your day	What to do
Start	Unlock under your name, check the branch/terminal, count opening cash and open your shift.
Build a sale	Add products or scan barcodes; choose variants/modifiers and quantities; check the order type; use eligible configured discounts or SC/PWD handling.
Pause a customer order	Hold the cart and resume it using the terminal guide.
Take payment	Check totals and payment method, complete payment, then print the receipt. Preserve and resolve any payment whose result is uncertain.

Point in your day	What to do
Find a past sale	Open History , select the date and sale, and follow the receipt/reprint or correction procedure.
Record drawer movements	Use the shift cash movement procedure with the amount, type and explanation.
Correct a sale or stock count	Request manager/owner approval when the terminal requires it.
Finish	Close your own shift, count cash, review/print the closing report and lock the terminal.

Get approval for a sensitive action

A cashier needs an active manager assigned to this branch, or the business owner, to approve **voids**, **refunds** and **terminal stock adjustments**.

1. Prepare the action in the terminal, including the required reason or corrected quantity.
2. Ask the manager or owner to review it in person.
3. In **Manager or owner approval**, the approver selects their own name under **Approver**.
4. The approver enters their own six-digit **Approver PIN**.
5. Complete the action with its confirmation button and check the result.

The approval covers that action only. Your drawer stays under your name. Your own PIN or another cashier's PIN cannot substitute for an eligible approver. Normal sale/shift rules still apply; for example, a void must be eligible under the terminal guide's rules.

If no approver appears, ask the owner to check the manager's active status, completed setup and branch assignment.

Know what your role can do

Task	Cashier access
Sell products, hold/resume carts and take supported payments	Allowed during your own open shift.
Apply discounts configured by the owner and eligible SC/PWD treatment	Allowed where available in the sale screen.
Add a miscellaneous/open-price item	Allowed when enabled for the business.
Enter your own free-form discount amount or percentage	Unavailable to cashiers and managers. Ask the owner to configure the required discount.
Print or reprint receipts	Allowed; follow the terminal guide.
Open and close a shift, record cash movements	Allowed for your own drawer.
Void/refund a sale or adjust terminal stock	Assigned manager/owner approval required.
Receive a delivery	Ask the owner/manager to receive it in portal Stock; the terminal only has stock adjustment.

Task	Cashier access
View My activity	Your sales and drawers in the paired branch.
View History	Receipts recorded at this terminal; this is separate from My activity.
Receipt paper width, preview and test print	Available in terminal Settings .
Pair a device or confirm terminal Unpair...	Requires owner sign-in.
Portal reports, stock transfers/counts, catalog/prices, staff or business settings	Owner/manager portal work within their permissions; unavailable to cashiers.

The business owner controls your role, assigned branches and status. **Pending** means setup or a credential reset is unfinished. **Active** means access is ready. **Deactivated** means access has been removed.

Review your activity

1. Select **My activity** in the POS top bar.
2. Review your **Sales** and **Drawers** for this branch. The page shows the latest 100 of each.
3. Drawer over/short variance appears after the drawer closes.
4. Select **Refresh** to reload the information.

Use **History** for receipt lookup and reprinting. History lists sales at the current terminal, so it can include another operator's earlier receipts. My activity is the view filtered to your own identity.

Change or recover your PIN

1. Ask the business owner to use **Reset terminal PIN** on your staff record. Close your own shift before the reset when possible.
2. Receive the new temporary PIN privately from the owner. Existing sessions end, and your account becomes **pending**.
3. At an assigned terminal, choose your name.
4. Enter **Temporary PIN**, a different **New terminal PIN**, and **Confirm terminal PIN**.
5. Select **Set PIN and unlock**.

If the owner has hidden or lost the displayed temporary PIN, they must issue a fresh one. The previous PIN cannot be displayed again.

Role or branch changes can end your current session. A change of role requires fresh setup. Reactivation can restore your existing complete PIN; if setup is incomplete, the owner must provide a new temporary PIN. Ask the owner which path applies.

Common problems

What you see	What to do
Your name is missing	Check the terminal's branch. Ask the owner to verify your assignment and status.
The terminal shows Pair instead of your names	Ask the owner to pair the device. Cashier credentials cannot pair it.
Temporary PIN rejected	Use the newest PIN and check your name. It may be expired, used, replaced or exhausted after five wrong attempts. Ask the owner for a fresh one.
Your personal PIN is locked	Four failed attempts trigger a five-minute lock. Wait for the displayed retry period, then enter the correct PIN. Ask the owner for a reset if you do not know it.
Only another operator can resume the drawer	That person must close their shift. Contact the manager/owner if the operator's access has been removed.
Approval PIN is rejected	Ask the approver to check their identity/PIN and assignment. An approver's PIN lockout can also prevent approval.
The screen returns to unlock	Unlock again with your own PIN. If denied, ask the owner whether your access, role, email or branches changed.
A discount or option is missing	Ask the owner to check the business configuration. Cashiers cannot enter free-form discounts or change the catalog.
A payment or operation's result is unclear	Keep the original transaction and follow the terminal guide's recovery steps. Ask the manager before creating another sale or repeating the operation.
Network/API unreachable	Check the connection and inform the manager. Follow the terminal guide's guidance; online selling requires connectivity.

Give your manager or owner the branch, terminal code, action, approximate time and displayed error/reference. Do not send passwords or PINs.

Website and CMS editor guide

[Guide home](#) · [Accounts and access](#)

Your job: maintain the public Sentry marketing website and its terms/privacy pages. The CMS does not manage store products, staff, stock or payments.

Sign in to the correct account

1. Open [Sentry CMS](#).
2. Enter your CMS email and password.
3. Open the relevant item under **Content** or **Settings**.

CMS identities are separate from platform-admin identities. The same email can be supplied for separate accounts, but signing in to `/admin` or `/portal` does not give CMS access. Get your CMS account from an existing CMS administrator. The first CMS administrator is established during deployment; there is no public CMS registration link on the landing page.

The CMS has its own logout: **five failed login attempts** can lock access for **ten minutes**. Its email recovery cannot deliver mail while email is disabled.

Edit the public landing page

Where: **Content** → **Landing page**.

1. Open the appropriate tab from the table below.
2. Edit the text or list rows you want to change.
3. Preserve the required number of rows where the form sets a minimum/maximum.
4. Save the global document with the CMS save control.
5. Open the [public website](#) and verify the saved change after refreshing.

Landing content saves update the live page; there is no separate draft/publish workflow configured for this global. Treat saving as publishing. Required fields must be valid before saving.

Tab	Editable content	Notes
Meta	Browser/search title and description	Describe the current POS product accurately.
Nav & hero	Navigation labels/links, badge, headline, supporting text, primary/secondary button labels, activity ticker	Up to six nav links. Ticker lines are example text, not a live activity feed.
Features	Icon, tone, title and body for feature cards	Exactly three cards; icons: counter/chart/record, tones: mint/purple/orange.
Counter	Eyebrow, heading and bullets next to the POS illustration	Lists can be edited and reordered.

Tab	Editable content	Notes
Numbers	Eyebrow, heading and analytics bullets	Keep claims aligned with current reporting/email availability.
Branches	Heading and illustration/text cards	Exactly four cards; illustrations: transfer, expiry, stocktake, terminals.
Product	Showcase eyebrow/heading/subtext, three device captions, extra feature cards	Exactly three device captions.
Call to action & footer	Banner text/button label, contact email/links, footer links and copyright	Contact email is used by the Request access buttons.

Useful navigation anchors are `#counter` , `#numbers` , `#branches` , `#product` and `#contact` . Use `/terms` and `/privacy` for the built-in policy pages. Check edited links on the public site.

Request access opens an email draft addressed to the configured contact email. Editing its label does not turn it into account registration. The primary sign-in destination remains portal sign-in. The page's device mockups and illustrations are built into the design; the listed fields edit their captions and content, not the application screenshots themselves.

Upload or maintain marketing images

Where: Content → Media.

1. Create a media record and select a **JPEG**, **PNG** or **WebP** image, up to **4 MB**.
2. Enter the required **Alt** text describing the image.
3. Save and inspect the image/record.
4. Use the media list to open, replace or remove an image when appropriate.

The CMS produces wide/card versions for supported uses. CMS media is publicly readable marketing content. Uploading an image does not automatically add it to the landing page: the current landing-content form has no arbitrary hero-image selector. Store product images and business logos are managed by the owner in the store portal instead.

Save a draft policy

Where: Content → Terms and privacy.

1. Enter the public **Business name** and **Contact email**.
2. Expand the **Terms** or **Privacy** group.
3. Enter the policy text in **Body** and set its **Effective date**.
4. Leave **Published** unchecked while it is a draft.
5. Save.

Use blank lines between paragraphs. Unpublished policy text is not shown to visitors; the public policy page instead says the policy is being prepared.

Publish or unpublish terms/privacy

Before publishing: obtain the reviewed policy text your organization intends to publish.

1. Open **Terms and privacy**.
2. Ensure business name, contact email, effective date and body are complete for the policy.
3. Check that policy's **Published** box.
4. Save.
5. Open [Terms](#) or [Privacy](#) and verify the text, date and contact information.

Terms and privacy have separate publication switches. Saving a published policy changes its live text. To remove a policy from public view, uncheck its **Published** box and save. The CMS refuses publication with missing required business details, date or body.

Manage CMS users

Where: [Settings](#) → **CMS users**.

1. Open the user list and create a user through the CMS record-creation control.
2. Enter the person's name, email and password in the CMS user form.
3. Save and give the person their CMS access details through your usual account handover.
4. Use the user record to maintain name/email/password or remove CMS access when needed.

There is no separate limited “editor” role configured in this CMS collection. A CMS user can access CMS administration, so create these accounts only for people responsible for website content and CMS users. Creating one does not create a platform-admin, owner or staff account.

Verify changes and sign out

After saving, refresh the relevant public page. If it appears unchanged, confirm that the save succeeded and that you are checking the matching page. Check **Published** for policies. See [Troubleshooting](#) for further steps.

Use the CMS account/logout control to sign out when finished.

Next: [troubleshooting](#) →

POS terminal user guide

[Guide home](#) · [Accounts and access](#) · [Owner](#) · [Manager](#) · [Cashier](#)

Use the [Sentry POS terminal](#) to record sales and run a cash drawer. Use the [Sentry portal](#) for business setup, staff administration, catalog maintenance, and wider reporting.

This guide describes the current terminal. Amounts are in Philippine pesos; displayed transaction times use Manila time. Instructions use the button names shown on screen.

Before you begin and permissions

You need a paired terminal, a personal six-digit terminal PIN, access to the terminal's branch, and an internet connection. Selling also requires an open shift belonging to the signed-in operator. Ask the owner to finish business, branch, product, price, stock, tax, and staff setup before the first trading day.

Pairing belongs to the browser profile used on the device. Return to that profile for daily work. Keep its saved browser data: pairing, held sales, and uncertain payment recovery depend on it. Clearing site data or moving to a different browser does not transfer the drawer or create a safe payment recovery.

A terminal is bound to one branch. Several terminals at a branch can share stock, but each has its own identity, receipt sequence, and drawer. Confirm the branch and terminal before taking money.

Task	Owner	Manager assigned to this branch	Cashier assigned to this branch
Pair or unpair locally with the owner's email and password	Yes	Owner must do it	Owner must do it
Unlock with a personal terminal PIN	Yes, after setting the owner PIN	Yes, after credential setup	Yes, after credential setup
Open a shift, sell, take payments, print receipts	Yes	Yes	Yes
Resume, move cash, or normally close an open drawer	Only if you opened that drawer	Only if you opened that drawer	Only if you opened that drawer
Use active business discounts and SC/PWD controls	Yes	Yes	Yes
Enter a free percentage or peso discount	Yes	No	No
Void a completed sale in its own open shift	Yes	Yes	In-person manager or owner approval
Refund a completed sale	Confirm with your owner PIN	Confirm with your manager PIN	In-person manager or owner approval
Adjust terminal stock	Yes	Yes	In-person manager or owner approval
Recover an ineligible operator's drawer with emergency close	Eligible owner approval	Eligible branch manager approval	Request an eligible approver

Owner credentials used for pairing are separate from the personal PIN used for terminal operation. Platform administrator credentials do not make someone a terminal operator. Staff administration and PIN recovery are covered in [Accounts and access](#).

The main tabs are **Sale**, **History**, **Shift**, **Stock**, **Settings**, and **Activity**. Cashiers see **My activity** for the last tab. On small screens, scroll the tab bar sideways. On **Sale**, a narrow screen shows a product list and **View sale** at the bottom; a wider screen keeps the current sale beside the catalog.

Pair a terminal

Who: The business owner. **Before you begin:** Use the intended counter device and browser profile. The business and branch must already exist, and the owner account must be active.

1. Open the [terminal](#). An unpaired browser shows **Pair this terminal**.
2. Enter the owner's **Email** and **Password**, then select **Sign in**.
3. Select the correct **Business**.
4. Select the correct **Branch**; each option shows its name and branch code.
5. Enter a recognizable **Terminal name**, such as the physical counter name. The initial suggestion is **Counter 1**.
6. Check the business, branch, and name, then select **Pair terminal**.

7. Wait for pairing and catalog loading to finish. The operator unlock screen is the next step.

Result: This browser is connected to one business and branch and receives a terminal code. Pairing does not sign a cashier into a drawer and does not open a shift.

If no suitable business or branch appears, the owner must check that an active business and branch exist in the portal. A manager or cashier cannot pair using their own portal credentials. To move a paired browser to a different branch, finish its work, [unpair it](#), then pair it again. Re-pairing creates a new terminal identity rather than reusing the old code.

Unlock, set a PIN, lock, and change operator

Unlock for daily work

Before you begin: The terminal is paired, your name is eligible for this branch, and you have a permanent six-digit PIN.

1. On **Unlock this terminal**, check the branch name.
2. Select your own name.
3. Enter **Your PIN**.
4. Select **Unlock terminal**.
5. If your drawer is still open, resume it. Otherwise, continue to **Open a shift**.

Result: Sales and drawer actions are attributed to you.

When a drawer is already open, only its original operator can normally resume it. Other names are disabled. A manager's presence or approval does not transfer that drawer.

If your name is absent, ask the owner to check your active status, business, and branch assignments. If you are the owner and the screen asks you to set an owner PIN, do that in portal settings first; you do not need a separate staff account.

Replace a temporary PIN

Before you begin: The owner has issued a fresh temporary PIN for cashier setup or a terminal PIN reset. First-time manager credential setup uses the access flow described in [Accounts and access](#).

1. Select your name on **Unlock this terminal**.
2. Enter **Temporary PIN**.
3. Enter a different six-digit **New terminal PIN**.
4. Enter the same new value in **Confirm terminal PIN**.
5. Select **Set PIN and unlock**.

Result: The temporary PIN is consumed and your permanent terminal PIN is set. Use the new PIN next time.

Temporary PINs expire after 15 minutes and stop working after five failed verification attempts. A newly issued temporary PIN replaces the previous unused one. Ask the owner for a fresh PIN if it expires or is rejected; do not keep guessing.

Lock when you leave the counter

1. Select **Lock** in the top bar.
2. Confirm that the unlock screen appears.
3. To return, choose your name and enter your PIN.

Result: The terminal is locked. The cart, held sales, unresolved payment, and open drawer remain.

The terminal also locks after five minutes without activity. Reloading always requires a PIN. An operator session lasts at most 12 hours, so a long working day may require unlocking again.

Change operator at a handover

1. Resolve any [uncertain payment](#).
2. Complete, discard, or clear all unsubmitted sales.
3. Count and [close the current operator's shift](#).
4. Select **Lock**.
5. The next operator selects their own name, enters their PIN, and opens a new shift with the cash they actually receive.

Result: Each operator has their own drawer attribution.

Locking alone is not a shift handover. If the original operator remains eligible, they must normally close their own drawer. [Emergency close](#) is reserved for an operator who is no longer eligible, or a legacy drawer without an operator.

Wrong PIN or password

Four failed permanent PIN attempts cause a five-minute PIN lock. Owner password attempts have their own four-attempt, five-minute lock. A further wrong attempt after the waiting period can lock the account again; a successful verification clears that credential's failure count.

Approval PIN attempts use the approving person's PIN, so an incorrect approval can affect that person's ability to unlock or approve. Wait for the stated time, verify the correct credential, and use the recovery process in [Accounts and access](#) when needed.

Open a shift

Who: Any eligible owner, manager, or cashier operating their own drawer. **Before you begin:** Unlock the paired terminal and count the cash physically present.

1. On **Open a shift**, enter **Opening cash** using the money pad.
2. Enter an explicit zero if there is no opening float.
3. Select **Open shift**.
4. Check that the terminal opens **Sale** and shows **Shift open** with the opening time.

Result: A drawer is opened for your operator identity. Opening cash is a change float, not a sale.

Only one shift can be open on a terminal. If the terminal says a shift is already open, return to unlocking and resume the original operator's drawer rather than trying to create another. A shift does not close automatically at midnight or at the business-day boundary.

Find and add products

Search or browse

Before you begin: Your shift is open and the catalog has loaded.

1. Open **Sale**.
2. Select a category, or select **All** to search the full catalog.
3. Enter part of a product name or SKU in **Search products**. Search is case-insensitive and still respects the selected category.
4. Select the product tile or row.
5. If configuration is required, finish the **variant, modifier, or weight controls**.
6. Check the item and amount in **Current sale**. On a narrow screen, select **View sale**.

Result: The item enters the cart. Repeated selections of a plain product normally increase its existing line quantity; customized modifier selections have their own lines.

Only active catalog products appear in normal browsing. If **No products match** appears, clear the search and choose **All** before asking the owner to check the catalog.

The product price is captured when the item is added. Later catalog refreshes do not silently change the price already in your cart.

Scan a barcode

Before you begin: The owner has configured the product or variant barcode. Use a scanner that behaves like a keyboard and sends Enter after the code.

1. Keep the **Sale** screen open and close any product dialog.
2. Scan the item.
3. A plain matching item is added immediately. A product requiring a variant, modifier, or weight opens its configuration first.
4. Check the selected item, variant, quantity, and total.

Result: The scan adds the catalog match without needing a typed name search.

The current scanner flow recognizes numeric codes of at least four digits. It uses fast keyboard input followed by Enter. It does not offer camera scanning or direct scanner pairing inside Sentry. If **No product for ...** appears, find the item by name or SKU and ask the owner to correct its barcode.

Stock warnings

A tracked item can show **OUT**, and cart changes can be rejected when stock is insufficient. Do not replace a catalog item with a miscellaneous item merely to bypass its stock control. Ask an authorized person to check the actual quantity.

Stock can change while another terminal sells. The final sale is checked again when you complete payment; a product being visible in the cart is not a stock reservation.

Variants, modifiers, weight, quantities, and miscellaneous items

Choose a variant and modifiers

1. Select a product with choices.
2. Under **SIZE — CHOOSE 1**, select the requested variant when that section appears. A scanned variant can already be selected.
3. Select the requested modifiers in each group. Follow the group's required minimum and maximum.
4. For a unit item, adjust quantity with – and +. For a weighted item, enter **Weight (kg)**.
5. Check the total beside **Add**, then select **Add — [amount]**.

Result: The chosen variant and modifiers are listed in the cart with their price effect.

Add remains disabled while a required choice is missing. A modifier group with one allowed choice replaces its previous selection; a group at its maximum will not accept another option.

To correct a variant or modifier selection after adding it, remove the line and add the correct configuration again.

Add or change weight

1. Select a product sold by weight.
2. Enter its measured **Weight (kg)**; up to three decimal places are supported.
3. Check the displayed line total and select **Add**.
4. To change an existing weighted line, select its weight button, enter the corrected weight, and confirm.

Result: The charged quantity is the entered number of kilograms.

Read the weight from your scale and enter it. Sentry does not automatically read a connected weighing scale. For a product with variants or modifiers, enter weight within its configuration dialog.

Change quantity or remove a line

1. In **Current sale**, use + or – on a unit line.
2. Check the recalculated amount.
3. To remove the line directly, select its × button.
4. Decreasing a unit line from one to zero also removes it.

Result: The unpaid cart changes. A completed sale requires a void or refund instead.

Add a miscellaneous item

Before you begin: The owner has enabled miscellaneous items for the business. The + **Misc item** button must be visible.

1. Select + **Misc item**.
2. Enter **Name** and a positive **Amount**.
3. Select **Add**.
4. Check the new line. Use its quantity controls if necessary.

Result: An off-catalog unit line is added. It does not deduct catalog stock and is reported as miscellaneous activity.

This does not create a reusable catalog product. Ask the owner to add recurring products to the catalog.

Notes and customer details

The terminal currently has no order-note or line-note entry and no customer profile form. Use configured modifiers for supported product choices. A held sale's **Label** helps identify that hold; it is not an order note. Stock adjustments have their own optional note and cash movements require a reason.

Order type, discounts, SC/PWD, and service charge

Set the order type

1. In **Current sale**, select **Dine-in**, **Takeout**, or **None**.
2. Check the totals before charging.

Result: The sale records that order type. A configured service charge applies only to **Dine-in**, using the subtotal after discounts. **Takeout** and **None** have no service charge.

Tax and service-charge rates come from the owner's business settings. Catalog prices are VAT-inclusive; the terminal shows the included VAT rather than adding the same VAT again.

Apply or remove a named discount

Who: Owner, manager, or cashier. **Before you begin:** The owner has created an active discount that applies to the line or order.

1. For a line discount, select the line's **Discount** badge. For an order discount, select **Discount** at the bottom of the cart.
2. In **Line discount** or **Order discount**, select the appropriate business discount.
3. Check its effect in the totals.
4. To change it, reopen the same control and select another option.
5. To remove it, reopen the control and select **Remove discount**.

Result: The selected line or order discount is applied. Choosing a new discount replaces the prior discount at that level.

If no relevant option appears, ask the owner to check the discount's active status and where it applies. The system will not let discounts take the payable subtotal below zero.

Enter a free discount

Who: The owner operating the terminal.

1. Open **Line discount** or **Order discount**.
2. Under **FREE ENTRY**, choose **Percent** or **Amount**.
3. Enter the discount. Percentage entry uses whole numbers up to 100; amount entry uses pesos.
4. Select **Apply [discount amount]**.
5. Check the total before charging.

Result: The entered discount applies to the selected scope.

Managers and cashiers must use the configured business discounts. An in-person approval does not unlock owner-only free-discount entry.

Apply SC/PWD treatment

Before you begin: Check eligibility under your business's approved process.

1. Select **SC / PWD** at the bottom of the current sale.
2. Enter the customer's **ID number** and **Name**.
3. Select **Apply**.
4. Review each line's **SC/PWD** badge. Applying the customer details initially marks every current line; unmark lines that should not receive the treatment.
5. Review any items added afterward: new lines are initially marked while SC/PWD details remain active.
6. Check the final total and included VAT before charging.
7. To remove the customer treatment, reopen **SC / PWD** and select **Remove SC/PWD**.

Result: On marked lines, Sentry removes included VAT first and then applies 20%. A line receives the larger of its SC/PWD treatment or its line promo discount, with ties choosing SC/PWD. Order discounts exclude lines whose applied treatment is SC/PWD.

The receipt prints the customer's SC/PWD ID and name when that treatment contributes to the discount.

Hold, resume, discard, or clear a sale

Held sales are saved in this browser for the current shift. They are unpaid and do not reserve stock. Resolve every hold before closing the drawer.

Hold the current sale

1. In a nonempty **Current sale**, select **Hold**.
2. Enter a recognizable **Label**.
3. Select **Hold** in the dialog.

Result: The cart moves into **Held** and a fresh cart is shown.

Resume a held sale

1. Open **Held · [count]** in the cart pane.
2. Find the label, line count, time, and amount.
3. Select **Resume**.
4. If another current sale is nonempty, the terminal asks **Replace the current sale?**. Select **Cancel** to retain it, or **Replace** only after deciding that its unsaved contents can be discarded.
5. Recheck the resumed cart and continue checkout.

Result: The held sale becomes the current sale and is removed from the held list.

If you need to keep the current sale before resuming another, hold it first. **Replace** is not a merge.

On a narrow screen, use **View sale** to reach the cart controls. If only held sales remain and the empty cart leaves **View sale** disabled, use a wider terminal view to reach **Held**.

Discard a hold

1. Open **Held** · [count].
2. Select **Discard** beside the unwanted hold.
3. Confirm **Discard this hold?** by selecting **Discard**, or select **Cancel**.

Result: That unpaid hold is removed. No completed transaction is reversed.

Cancel or clear an unpaid cart

1. Select **Clear** in **Current sale**.
2. Check **Clear this sale?**.
3. Select **Clear sale** to remove every line, or **Cancel** to retain the cart.

Result: The current unpaid cart is cleared; held sales remain.

Before a payment is submitted, ← **Back to sale** on the payment screen returns to cart editing. Once a payment is awaiting confirmation, follow the recovery steps below rather than clearing or replacing it.

Take payment

Before you begin: Your own shift is open. Check items, quantities, order type, discounts, and **Total**.

1. Select **Charge** [amount].
2. Check **AMOUNT DUE**.
3. Select **Cash**, **Card**, **GCash**, **Maya**, or **Other**.

Each sale uses one payment method. Split payments are not available.

Cash

1. In **Cash tendered**, enter the cash received.
2. Select **Exact** for the precise amount due, or use the **₱100**, **₱200**, **₱500**, and **₱1000** buttons as money is received. These denomination buttons add to the amount already entered.
3. Read **Short** or **Change**.
4. If **Short** appears, collect the shortfall or return to the sale before submitting. **Complete sale** is disabled while cash is short.
5. Check the tendered amount and select **Complete sale** once.
6. Wait for **Sale completed — [receipt number]**.
7. Give the displayed change and print the receipt if required.

Result: The cash payment and change are recorded, stock is deducted, and the cart clears.

Card, GCash, Maya, or Other

1. Complete and verify the payment using the appropriate external card or wallet service.

2. Select the matching method in Sentry.
3. Enter **Reference number (optional)** when available.
4. Select **Complete sale** once.
5. Wait for **Sale completed — [receipt number]**.

Result: Sentry records the sale's full total under that method. The reference appears on the receipt when entered and is available in reports and exports.

Selecting a payment method in Sentry records the payment; it does not itself charge a card, validate a wallet transfer, or contact a payment gateway. Confirm the actual payment through your normal provider before recording it.

Recover an uncertain payment or stock conflict

Payment awaiting confirmation

An interrupted connection can leave it unclear whether the server committed the sale. The terminal preserves the original cart, payment method, amount, reference, and receipt intent.

1. Stop editing or attempting to create a replacement sale.
2. Restore the internet connection.
3. If the terminal has locked or reloaded, unlock as the original operator. It should return to the pending payment.
4. Read **This payment is awaiting confirmation. Retry the original payment before changing the sale.**
5. Select **Retry original payment**.
6. Wait for a confirmed receipt or a specific rejection. Retrying the original transaction returns an already recorded sale instead of creating a second one.
7. If recovery keeps failing, leave the original payment intact and ask the owner or support to verify the transaction.

Result: A confirmed transaction proceeds to its receipt, or a definitive rejection releases the sale for correction.

The terminal disables payment editing and **Back to sale** while confirmation is pending. Do not collect the customer's money again merely because the receipt has not appeared. Do not unpair, clear browser data, or use emergency close to discard an unresolved payment.

Stock changed during checkout

1. Read **Stock changed — fix the highlighted line.**
2. The terminal returns to **Sale** and highlights conflicting lines with **stock changed — adjust or remove.**
3. Check the actual stock. Reduce quantity, remove an unavailable item, or ask an authorized person to correct stock.
4. Check the cart total again.
5. Select **Charge** and finish payment again.

Result: The rejected attempt does not consume a receipt number or become a successful sale.

If money was already received externally, settle any changed amount with the customer before completing the corrected transaction. The stock check does not automatically reverse an external wallet or card payment.

Other rejection

Read the message before repeating the action. A changed business discount or rate can cause a catalog/totals rejection. Once the terminal has definitively rejected the payment and editing is available, refresh the catalog and review the cart; remove and re-add affected lines or discounts when appropriate. If the screen still says awaiting confirmation, use **Retry original payment** and keep its original values.

Print and reprint receipts

Print after checkout

1. On **Sale completed — [receipt number]**, review the receipt.
2. Select **Print receipt**.
3. In the browser's print dialog, select the installed receipt printer and matching paper setup.
4. Complete the browser print action.
5. Select **Done — new sale** when you are ready for another customer.

Result: The recorded receipt is printed. Printing is optional and does not decide whether the sale was committed.

The receipt uses the business's branding and configured header/footer, branch information, receipt number, items, discounts, total, payment, change or reference, and tax figures. Ask the owner to correct receipt content in the portal.

Reprint a past receipt

1. Open **History** and find the sale.
2. Select the sale row.
3. Select **Reprint**.
4. Complete the browser print action.

Result: A copy is printed with **REPRINT**. Voided or refunded receipts also show their current status. A reprint does not create another sale or change the receipt number.

Printer setup

1. Install and configure the printer through the device or operating system.
2. In **Settings**, select **58 mm** or **80 mm** under **Receipt paper width**.
3. Select **Test print**.
4. Select the printer in the browser dialog and check that the output fits the roll.
5. Adjust the printer's paper settings and browser print options if needed, then test again.

Result: Sentry uses the selected receipt width for receipts and Z reports.

Printing uses the browser's print dialog. Sentry currently has no direct Bluetooth/USB printer connection screen, silent print integration, or automatic cash-drawer opening. Printer detection, cutting, and available paper sizes depend on the operating system, printer driver, and browser. Printing can briefly wait for a business logo; if the printer or dialog fails, use **Reprint** rather than recording the sale again.

History, voids, refunds, and approvals

Find a sale

1. Open **History**.
2. Use **Today**, **All**, or **Pick a date**.
3. Select the sale row to review its receipt and status.
4. Use ← **History** to return to the list.

Result: You can review recorded sales from this terminal.

History is terminal-wide, so a cashier can see other operators' sales recorded on this terminal. Its date filter uses the Manila calendar date, which can differ from the configured business-day cutoff used in portal reporting. For your own records across the branch, use [My activity](#).

Void a same-shift mistake

Before you begin: The sale is completed, its original shift is still open on this terminal, and you are the original drawer operator. Cashiers need an eligible approver.

1. Open the sale in **History**.
2. Select **Void...**
3. Enter a clear **Reason**.
4. If **Manager or owner approval** appears, follow the [approval procedure](#).
5. Select **Void sale**.
6. Check the sale's updated status.

Result: The entire sale is voided, its stock returns automatically, and the sale remains visible in History and the shift's Z report. A same-shift cash void removes that sale from the drawer's cash-sales calculation.

Void is not offered for a closed-shift sale or one already voided/refunded. Use a refund for a completed sale whose shift has closed. For a card or wallet mistake, arrange the actual reversal with the payment provider; the terminal status change does not send money.

Refund a completed sale

Before you begin: The sale remains completed. You have checked the return and how money will be returned. Refunds are for the whole sale.

1. Find and open the sale in **History**.
2. Select **Refund...**
3. Enter **Reason**.
4. An owner enters their current owner PIN; a manager enters their current manager PIN. A cashier uses **Manager or owner approval**.
5. Select **Refund [full amount]**.
6. Check the updated **refunded** status and arrange the actual customer repayment using your business's process.

Result: The entire sale is marked refunded, its stock returns automatically, and attribution and the reason are retained.

For a cash sale refunded while its own original shift remains open, that shift's expected cash is reduced. A refund outside the original open shift is recorded outside the current shift and does not automatically reduce a later drawer's expected cash. If cash actually leaves the current drawer for such a refund, record that movement under **Cash out** with an explanatory reason. Avoid recording another cash-out for a same-shift cash refund already deducted automatically.

Noncash refunds do not change expected cash. Sentry does not automatically refund a card or wallet. Partial refunds, changing individual refunded quantities, and refunding an already reversed sale are not supported.

Give in-person approval

Who: An eligible owner or manager assigned to this branch, with a permanent PIN. **Used for:** A cashier's void, refund, or stock adjustment.

1. Review the sale or stock change, amount, and reason together with the cashier.
2. In **Manager or owner approval**, choose your identity under **Approver**.
3. Enter your own six-digit **Approver PIN** in person.
4. The cashier completes that one action using its confirmation button.
5. Check the success result before repeating any action.

Result: Only the requested action is authorized. The cashier remains the operator and retains ownership of the drawer.

The approver must currently be eligible. Approval is cleared after the action; re-enter it for a later action or a failed attempt. Never substitute a generic shared refund PIN for the person's own PIN.

Cash movements, shift review, and closing

Record cash in or out

Who: The operator who owns the open drawer.

1. Open **Shift**.
2. Under **Cash movements**, select **+ Cash in** for money entering the drawer or **- Cash out** for money leaving it.
3. Enter a positive **Amount** and an explanatory **Reason**.
4. Select **Record**.
5. Check the movement list when it is visible. With blind closing enabled, ask the owner or manager to verify the recorded movement in the portal if confirmation is unclear.

Result: The shift records the direction, amount, time, operator, and reason. Cash in increases expected cash; cash out decreases it.

Use these controls for float top-ups, safe drops, or cash expenses. A cash movement is not a product sale. Record actual physical movements accurately and do not use a correction movement to conceal an unexplained shortage.

If **Record** reports a connection error, check whether the movement already appears after returning to or reloading **Shift** before submitting it again. Blind closing hides pre-close cash movement history; ask the owner or manager to check the portal rather than repeating an uncertain movement.

Review the shift

1. Open **Shift**.
2. Review the sales totals, payment-method totals, voids/refunds, SC/PWD discount, service charge, and cash movements shown.
3. If expected cash is visible, compare it with the physical drawer count.

Expected cash is opening float + non-voided cash sales – eligible same-shift cash refunds + cash in – cash out. Cash sales use the sale total, not the amount tendered before change. Card and wallet sales do not add cash to the drawer.

If the owner has enabled blind closing, cash-sensitive totals, the loaded cash movement history, and the Z preview are withheld before submission. This is intentional; count the physical drawer independently. Expected cash and over/short become visible in the closed Z report.

Close a shift

Who: The original operator of the open drawer. **Before you begin:** Resolve uncertain payments, complete or discard every held sale, and complete or clear the current unpaid cart.

1. Open **Shift**.
2. Under **Close shift**, select **Counted cash**.
3. Count the physical cash and enter that count in **Count the drawer**. Enter an explicit zero when the drawer is empty.
4. Select **Done**.
5. Review the count. If blind closing is off, review **Expected** and **Over / short**.
6. Select **Close & print Z**.
7. Wait for the final **Z REPORT**. This records the close; printing is a separate step.
8. Select **Print Z** and complete the browser print action.
9. Select **Done** to continue to **Open a shift**. For handover, lock and let the next operator unlock first.

Result: The drawer is closed with its counted cash, expected cash, and variance. A shortage or overage does not by itself block closing.

A held sale blocks the close button until completed or discarded. Enter the actual count rather than changing it to match the expected amount. If closing fails or the result is unclear, check the shift state before attempting to open another drawer.

Print or save the Z report before leaving its completion screen. The terminal has no general archive screen for reopening old Z reports; use the portal's shift/report views for past shift review.

Business-day boundary

If the business-day cutoff passes while a shift remains open, a banner says the day ended with the shift still open. Count and close it when appropriate. The banner refreshes while the terminal is in use. It does not automatically close the drawer or erase its sales.

Check or adjust stock

Check quantities

1. Open **Stock**.
2. Review tracked active products and their variants. Weighted quantities are labeled in kilograms.
3. Read **OUT** for no available quantity and **LOW** when quantity is at or below the configured low-stock threshold.
4. Use **Adjust** only after checking the physical stock and required permission.

Result: You see this branch's current tracked quantities. The terminal refreshes stock when this screen opens.

The terminal Stock list has no built-in search, receiving form, transfer flow, stock-count workflow, or expiry dashboard. Use the inventory workflows in the [Owner](#) or [Manager](#) guide for receiving deliveries, batches/expiry, transfers, formal counts, and stock history. Expiry on this terminal is an adjustment reason rather than a batch date or automatic expiry write-off.

Post an adjustment

Who: Owner or manager directly; cashier with an eligible approver. **Before you begin:** Identify the exact product/variant and physically count its new available quantity.

1. Select **Adjust** beside the correct stock row.
2. Read **System says**
3. Enter **New quantity**, the resulting stock balance. For example, if the system has 10 and two damaged units are removed, enter 8, not 2.
4. Check the displayed change (**Δ**).
5. Choose **Damage**, **Expiry**, **Theft / loss**, **Count correction**, or **Other**.
6. Enter an optional **Note** explaining the count or event.
7. If you are a cashier, obtain **Manager or owner approval**.
8. Select **Post adjustment**.
9. Wait for success and check the refreshed quantity.

Result: The branch balance is set to the entered quantity and an adjustment is recorded with the operator, approver when used, change, reason, and note.

Quantity cannot be negative. Unit items use whole quantities; weighted items accept up to three decimal places. Enter zero to remove all available quantity. An adjustment is not a substitute for receiving a delivery with its cost and batch information.

If stock changes or the connection fails while posting, reopen the stock list and verify its latest balance before deciding whether another adjustment is needed.

Settings, catalog refresh, and unpairing

Review settings

1. Open **Settings**.
2. Under **Receipt paper width**, choose **58 mm** or **80 mm** and use **Test print**.

3. Under **Receipt preview**, select **Preview** to inspect the sample layout.
4. Check **Connection** for the API reachability result and **last catalog load** time.
5. Check **Paired to ...** for the business, branch, terminal name, and branch code.

Result: You can check printer layout, connection, and the current binding.

Receipt branding and business configuration are maintained in the portal. The sample preview is not a newly recorded sale. Paper-width choice is saved on this terminal browser.

The top bar's **Online/Offline** chip describes the browser's network status. **Connection** checks whether the API can be reached when Settings opens. A green browser connection does not guarantee that the API is currently available.

Refresh catalog data

1. Have the owner finish the catalog or business-setting change in the portal.
2. Return to the terminal tab so it becomes active, or switch away and back.
3. Wait for a successful catalog load. The terminal also refreshes automatically every 30 minutes.
4. Open **Settings** to inspect **last catalog load**.
5. Check a newly added item or current setting before continuing.

Result: The terminal receives current catalog/settings/stock data without automatically repricing existing cart lines.

There is no manual **Refresh catalog** button. Reloading also starts a catalog load but requires unlocking again. Existing cart prices stay captured at the time of addition; a pending payment retains its original transaction values. Resolve pending payments before trying to alter them.

Unpair or move the terminal

Who: The owner of this business, using email and password. **Before you begin:** Resolve all uncertain payments and unsubmitted carts, close the drawer, and retain any needed printed records.

1. Open **Settings**.
2. Select **Unpair....**
3. In **Unpair this terminal**, enter the owning account's **Email** and **Password**.
4. Select **Unpair**.
5. Confirm that **Pair this terminal** appears.
6. To move branches, repeat **pairing** with the new branch.

Result: This browser's old device authorization is revoked and local working cart/operator state is cleared. Previously recorded sales remain in the business's server records.

The owner can also revoke the terminal remotely from the portal; the terminal returns to pairing when that revocation is detected. Unpairing is not a drawer close and does not resolve a possibly committed payment. A new pairing has a new terminal code and its History does not automatically become the old terminal's history.

Emergency drawer close

Who: An eligible owner or manager assigned to the branch. **Before you begin:** The original operator is no longer eligible, or the drawer is a legacy drawer without an operator. An eligible operator who is merely away, has forgotten a PIN, or is temporarily locked must normally recover access and close their own drawer.

1. On **Unlock this terminal**, select **Emergency close** when it is offered.
2. Review any blocked work. An unresolved payment must be checked first and cannot be discarded through this dialog.
3. If only unpaid carts remain and they are intentionally being abandoned, select **Discard unsubmitted carts**, then **Confirm discard of all unsubmitted carts**.
4. Count the drawer and enter **Counted cash**.
5. Enter an **Emergency close reason**.
6. Select the eligible owner/manager as **Approver** and have them enter their own **Approver PIN**.
7. Select **Submit counted close**.
8. Review the final Z report, use **Print Z**, then select **Done**.

Result: The drawer closes with the original operator attribution preserved and the closer/reason recorded. The approver is not signed in as a replacement operator. A new operator must unlock and open their own shift.

If the original operator is still active and eligible, the server rejects this recovery. If a pending payment cannot be resolved because the original operator is now ineligible, stop and involve the owner/support to reconcile it; the terminal offers no ordinary takeover or force-clear path.

Activity and personal records

1. Open **My activity** as a cashier, or **Activity** as an owner/manager.
2. Review **Sales** for receipt numbers, amounts, time, and status.
3. Review **Shifts & over/short** for open/closed drawers and completed variances.
4. Select **Refresh** to load the latest records.

Result: A cashier sees their own attributed sales and drawers at this branch. Owners and managers see branch activity. Each list is limited to the latest 100 records.

Over/short appears only after a drawer closes. **You** identifies your own activity; other records may say **Attributed operator** or **Legacy terminal activity**. This screen is a summary, not a receipt-detail or old-Z printing screen. Use **History** for this terminal's receipt details and portal reporting for wider records.

Troubleshooting and current limits

What you see	What to do
No eligible operators or your name is missing	Ask the owner to check active status and branch assignments. Use the access guide for setup or PIN reset.

What you see	What to do
Drawer belongs to its original operator	Unlock as that operator. Obtain action approval without switching them, or use eligible emergency recovery only when its conditions apply.
Wrong PIN, attempts left, or locked	Stop guessing. Wait for the stated lock period or ask the owner for the proper recovery.
No products match	Clear search, select All, refresh by returning to the tab, then have the owner check active catalog entries.
Barcode not found	Search by name/SKU; check the numeric barcode and scanner's Enter suffix.
OUT, insufficient stock, or highlighted stock conflict	Check actual stock, reduce/remove the line, or get an authorized adjustment. Recheck payment after changing the total.
API unreachable or Offline	Restore connectivity. The terminal does not complete live sales offline. A saved cart is not an offline sales queue.
Payment awaiting confirmation	Unlock as the original operator and use Retry original payment. Keep the original browser data and do not create a replacement transaction.
Approval rejected	Check the approver's assignment, active status, and current personal PIN; ask them to enter it again in person.
Close button disabled	Enter an explicit cash count and resolve all held sales. Resolve pending payments before closing.
Print dialog or printer fails	Check driver, paper width, and browser options. Reprint the recorded receipt; do not record another sale.
Terminal returns to pairing unexpectedly	Ask the owner whether it was revoked or account access changed. Do not re-pair blindly if a drawer or payment needs reconciliation.
Catalog looks old	Return focus to the tab and check last catalog load. Existing cart prices do not automatically update.

Current boundaries: one payment method per sale; full-sale void/refund only; no customer/order note form; no automatic scale, camera scanner, or direct printer/drawer integration; no full offline synchronization; and no delivery-receiving or batch-expiry interface on the terminal. Use the portal role guides for the business workflows outside these screens.

Daily checklist

Before the first sale

- [] Use the intended paired browser and confirm branch/terminal identity.
- [] Confirm internet and API access.
- [] Unlock using your own name and PIN.
- [] Resume your existing drawer or count float and open your shift.
- [] Resolve any payment awaiting confirmation before starting another sale.
- [] Check products/prices and confirm paper-width/test-print setup.

For each sale

- ☐ Check product configuration, quantity or weight, and available stock.
- ☐ Check order type, discounts, SC/PWD markings, service charge, and total.
- ☐ Verify actual cash or external payment.
- ☐ Submit once and wait for the completed receipt.
- ☐ Give change and print when required.
- ☐ Use Hold for unpaid work and Lock whenever leaving the counter.

Before closing or handing over

- ☐ Resolve every uncertain payment.
- ☐ Complete/discard holds and complete/clear the current unpaid cart.
- ☐ Record actual cash in/out with reasons.
- ☐ Count the physical drawer independently.
- ☐ Submit the actual counted close and retain the final Z report.
- ☐ Lock the terminal; the next operator unlocks under their own identity.
- ☐ Escalate unresolved access, transaction, or stock discrepancies to the owner.

Troubleshooting and common questions

[Guide home](#) · [Accounts and access](#) · [POS terminal](#)

Account and sign-in problems

What you see	What to check	Next action
Invalid email/password	Correct portal; correct account email/password; completed owner invitation or manager setup	Check typing with password visibility. Owners need activation; managers need active status and a terminal PIN. Cashiers use POS instead.
A lockout/countdown	Too many incorrect password/PIN attempts	Stop guessing and wait for the displayed countdown. Permanent login/PIN lockouts normally last five minutes after four failures.
No owner invitation	Email disabled, incorrect email, or invitation delivery issue	In this deployment email is off. New activation needs deployment/operator assistance and working email. There is no owner invite-copy/resend button.
No manager setup PIN	Manager challenges are sent only by email	They are not displayed to owners. Do not expect a PIN in logs while mail is disabled. Use an already active manager for current testing.
Temporary PIN rejected	Wrong account/role, old PIN, already used, older than 15 minutes, five failed attempts	Owner issues the latest challenge; finish the appropriate staff setup promptly.
Staff is Pending	First setup or owner-managed reset unfinished	Complete the matching manager/cashier procedure; generic Forgot password will not activate pending staff.
Staff is Deactivated	Owner has disabled access	Owner must reactivate and check whether retained credentials or new setup are required.
Owner is suspended	Platform access status	Contact the platform administrator. Resetting the password does not reinstate the account.
Cashier absent from operator list	Branch assignment, staff status and current terminal branch	Owner checks Staff and corrects assignments. Refresh operator information or reopen the unlock screen after the change.
Manager portal is missing a branch	Staff branch assignment	Owner checks the manager's assigned branches. Managers do not get automatic access to every branch.
Admin authenticator code rejected	Current code, device clock, repeated already-used code, expired sign-in step	Use automatic clock settings; wait for a fresh code. Restart sign-in if expired. An unused recovery code is an alternative.
CMS credentials fail in the portal	Separate CMS identity	Use <code>/cms</code> for CMS credentials; obtain a platform/owner account separately.

“The screen says an email was sent. Where is it?”

Email delivery is disabled in the current deployment, so no message is delivered even if a screen says “emailed.” This affects owner invitations, manager challenges, email password reset and daily summaries. Email being enabled without a configured delivery provider is also not the same as delivery to an inbox. The deployment operator must configure the service before those workflows can be relied on.

“Can I create my own owner account?”

Use **Request access** on the public website to prepare an email to the platform team. A platform admin creates your owner record. There is no public Sign up form. See [Accounts and access](#).

“Can I change my staff password or PIN myself?”

There is no signed-in staff credential-change page. The owner manages PIN resets and manager password-reset challenges. An already active manager can also use **Forgot password** when email works; it changes the portal password, not the terminal PIN or staff status.

Pairing, connectivity and sessions

The API takes time to respond after a break

The API runs on Render's free service and may need to wake after inactivity. Keep the browser open and let the request finish. If it fails, check your connection and try again after the service responds. If the request involved payment, follow the pending-payment procedure below before creating another sale.

The terminal asks to pair again

Check whether the browser's site storage was cleared, you opened a different browser/profile, the owner unpaired the terminal, or its branch/business was archived. Pairing belongs to this browser's stored device identity. Use the owner's pairing procedure in [POS terminal](#).

The terminal locks unexpectedly

Sentry locks after five minutes without human input, and reload requires a PIN again. The operator session also has a maximum lifetime. Select your operator name and unlock with your permanent PIN. A lock preserves the cart, pending payment and drawer; it does not close a shift.

Another operator cannot take over the open drawer

An open shift belongs to the operator who opened it. The original eligible operator must resume and close it before a normal handover. Manager/owner action approval does not transfer the drawer. Emergency close is available only when the original operator is no longer eligible; it is not a normal shift-switch shortcut.

Can I keep selling with no internet?

The current deployed POS needs the API for completed transactions and stock/shift operations. Local cart persistence and a pending-payment draft provide continuity and retries, but do not implement complete offline selling or an offline sales queue.

Cart, product and payment problems

Problem	Checks and remedy
Product missing at POS	Owner checks active status/category/catalog and the terminal's business. Refresh catalog at POS after changes.
Product price changed but the cart shows the old price	Cart prices are captured when an item is added. Review/replace the line before checkout if the current catalog price is intended. Refresh alone does not reprice existing lines.
Cannot add an item	Select required variant/modifiers or enter weight; check available tracked stock.
Barcode does not find an item	Check the product or variant barcode in owner catalog and refresh. Scanner input behaves like keyboard input; keep focus in the appropriate search/scan control.
Discount unavailable	Check that the owner created an active named discount for the intended level. Staff cannot type arbitrary free-form discount amounts.
Total differs from a simple percentage calculation	Check VAT-inclusive price, SC/PWD line treatment, promotional discounts and dine-in service charge. See calculation rules in POS terminal .
Payment button stays disabled	Check cart, stock requirements and selected payment method. Cash tendered must cover the amount due.
Card/wallet reference missing	Reference is optional in the current UI. Record the intended reference before submitting if needed for reconciliation.
Need split payment or partial refund	Current UI supports one payment method per sale and whole-sale refunds. Use your store's approved process for a transaction the app cannot represent.

Payment was submitted, then the network dropped

1. Keep the current browser/site data intact.
2. Reconnect and use the existing pending-payment retry/recovery controls.
3. Keep the original draft, amounts and request identity while its result is uncertain.
4. Check **History** for the resulting receipt once connectivity returns.
5. If still uncertain, have a manager/owner review the sale/payment record before starting a replacement transaction.

The app saves the pending payment so the same attempt can be retried without recording another sale. Do not collect payment a second time merely because the first response was lost. Full details are in [POS terminal](#).

Voids, refunds and cash

A correction is unavailable

Check the receipt status, shift and time rules in the [POS guide](#). A sale that is already voided/refunded cannot be corrected again as an ordinary paid sale. Cashiers need an assigned manager or owner to approve protected actions; a manager refund also requires PIN confirmation.

Cash is over or short at close

Count physical cash again, verify the opening float, review cash in/out entries, cash change and any refunded cash. Card/wallet sales are not physical drawer cash. Enter the actual count; do not change the counted amount just to make the variance zero. Review the closed shift/Z report and owner/manager shift analytics.

“Close & print Z” closed the shift but no paper appeared

The shift closes before printing. Use the separate **Print Z** action and the printer dialog. A print failure does not reopen the shift. See printing below.

Inventory and reports

Problem	Checks and remedy
Stock is in the wrong place	Check branch and product/variant. Products share a catalog across branches; quantities do not.
Expiry-tracked stock cannot be received	Enter an expiry date for that item even if the form's general label says optional.
Transfer is rejected	Source/destination must differ and belong to the same business; check assigned access, quantity and available source stock.
Count balance is unexpected	Review which rows were counted and when stock moved. A draft does not change stock until posted. Review the resulting movements after posting.
Product options disappeared after saving links	Modifier linking saves a replacement set. Select every group you want attached, including existing intended groups.
Profit is missing or understated	Cost data may be missing; variants have cost-entry limitations. Check recorded cost and the owner guide before interpreting margin. Managers cannot access cost/profit reports.
Demo reports are empty	Select the demo business explicitly; ordinary combined owner totals exclude demos.
Sales fall on an unexpected date	Dashboard/analytics follow the business's operating-day cutoff. Terminal History's date filter uses the Manila calendar date. Check both scope and cutoff.
Report export has fewer rows than expected	Check filters and export-specific limits. Inventory movement CSV currently includes the first 50 filtered movements. Use narrower filters or the account data export where appropriate.

Problem	Checks and remedy
Alert did not appear immediately	Alerts depend on stock/cutoff checks and scheduled service work. Background jobs do not run while the free API service sleeps. Refresh after it wakes.

Receipts and printers

1. Check the terminal's **Settings** and choose the matching **58 mm** or **80 mm** paper width.
2. Use the test-print or preview control.
3. In the browser/system print dialog, choose the intended printer and matching paper size.
4. Check printer connection, power, paper and driver settings if the preview is correct but paper output is not.
5. Use **History** → **receipt** → **reprint** after a completed sale. A reprint is marked as a copy.

Sentry uses browser printing. Hardware behavior depends on the device, driver and printer; this guide does not assume a particular printer has been certified. Skipping/canceling a print does not cancel a sale.

Website changes are missing

For landing content, confirm the CMS save succeeded and refresh the public page. For policies, verify the matching **Published** switch and required fields. Uploading Media alone does not add it to the landing design. Store product/logo images belong in the owner portal, not CMS Media.

Ask for help with useful details

Give your administrator the role, business/branch, terminal code, receipt number if relevant, time of the problem, the action you took and the exact error/reference shown. Include a screenshot of the error if helpful. Never include your password, permanent PIN, setup token or recovery codes.

Next: [glossary](#) →

Glossary

[Guide home](#) · [Feature index](#)

Word	Meaning in Sentry
Account / owner account	The owner's platform access and the businesses under it.
Active	Account/staff access status that permits use when required credentials are complete.
Adjustment	A stock correction entered with a reason; it changes quantity and records a movement.
Approval	A manager/owner PIN entered in person to authorize one protected cashier action. It does not switch operator.
Audit / activity log	Recorded events describing who did an action, when, and what changed.
Batch	A received group of stock with remaining quantity and, where tracked, an expiry date.
Blind close	A closing process that hides expected cash before the operator submits their count.
Branch	One location of a business, with its own stock and assigned terminals.
Business	One organization/catalog/settings scope under an owner.
Business-day cutoff / day start	Configured time when one trading/reporting day rolls into the next.
Cash in / cash out	Drawer cash added/removed outside sales, recorded with a reason.
Cash variance / over-short	Counted closing cash minus expected closing cash. Positive is over; negative is short.
Catalog	Products, categories, variants, modifiers and named discounts available to a business.
Category	A group used to organize products.
Centavos	One hundredth of a peso. 100 centavos = ₱1.00; some admin inspector amounts use this unit.
CMS	The separate website content editor at <code>/cms</code> .
Cost	Recorded unit purchase cost used for stock valuation and profit reporting.
Count / stocktake	Draft physical shelf quantities which, when posted, generate stock adjustments.
Demo business	A sample business for practice, excluded from ordinary combined owner reporting.
Discount, named	An owner-configured promotion staff select from the available list.

Word	Meaning in Sentry
Drawer / shift	One named operator's cash session on a terminal, from opening float to closing count.
FEFO	First expiry, first out: earlier-expiring batches are consumed first where expiry is tracked.
Float / opening cash	Cash already in the drawer at the start of a shift.
Gross profit	Sales less the recorded cost of sold items, under the report's rules; missing cost data affects it.
Held cart	An unpaid order saved for resuming later on the terminal. It is not a paid sale.
Hard suspension	Immediate platform access block that includes terminals mid-shift.
Low-stock threshold	Quantity level at which stock is considered low.
Misc item	A manually entered sale line available through POS; it is not a new catalog product.
Modifier	A selectable add-on/option, such as extra milk, grouped for use with products.
Operator	The named owner, manager or cashier currently unlocked on a terminal.
Pairing	Connecting a browser/device identity to a specific branch terminal using owner authorization.
Pending staff	Someone who must complete first-time setup or a credential reset before active use.
Pending payment	A saved submitted payment attempt whose result must be resolved/retried.
PIN	Six-digit terminal credential, distinct from a portal password.
Portal	Owner/manager/admin browser screens for management and reporting.
Receipt number	The identifier for a completed sale, useful for history, reprint and reconciliation.
Recovery code	An admin's one-use alternative to an authenticator code.
Refund	A recorded full-sale reversal under the app's eligibility/approval rules. Money-provider reversal is separate.
SC / PWD	Senior citizen / person with disability; POS supports dedicated discount/tax treatment.
Service charge	Business-configured surcharge applied to eligible dine-in orders.
SKU	A store's stock/product identifier; distinct from the scannable barcode.
Stock movement	A record of quantity changing through receiving, sales, correction, transfer or count posting.

Word	Meaning in Sentry
Suspension	Portal access block with a limited grace for already open terminal shifts.
Temporary PIN	One-use setup/reset challenge, expiring after 15 minutes.
Terminal	One paired counter browser, identified by name/code and associated with a branch.
TOTP / authenticator	Time-based code used as the platform admin's second sign-in factor.
Transfer	Moving stock between two branches of the same business.
Variant	A sellable version of a product, such as size; price/barcode/stock may be variant-specific.
VAT	Value-added tax as represented by the configured business and POS calculation.
Void	Reversal of an eligible completed sale, with reason/approval under the current shift rules.
Z report	The closing report for a shift, including sales/payment/cash information.

Feature index and permissions

[Guide home](#) · [Complete workflows](#) · [Glossary](#)

Use this index to find a function and see who can use it. **Assigned** means only the manager's permitted branches. **Approval** means an eligible manager/owner enters their own PIN for that action. Normal sale/shift rules still apply.

Account and platform features

Function	Who uses it?	Instructions
Request owner access	Visitor	Accounts and access
Initial platform-admin provisioning	Deployment operator	Accounts and access
Portal sign-in/sign-out	Admin, owner, manager	Accounts and access
Admin authenticator enrollment/recovery	Platform admin	Accounts and access
Owner creation/invitation/activation	Admin creates; owner accepts	Accounts and access
Owner name/business limit	Platform admin	Platform admin
Owner suspension/hard suspension/reinstatement	Platform admin	Platform admin
Read-only tenant inspection	Platform admin	Platform admin
Platform counts/metrics	Platform admin	Platform admin
Forgot password	Portal users with working email; staff status limits apply	Accounts and access
Staff creation/name/role/email/branches	Owner	Accounts and access
Manager setup	Manager with emailed challenge	Manager
Cashier setup	Cashier with owner-provided challenge	Cashier
Staff reset/reissue/deactivate/reactivate	Owner	Accounts and access

Business and catalog features

Function	Owner	Manager	Cashier	Instructions
Business/branch create, edit, delete	Yes	No	No	Owner
Categories and ordering	Edit	Read catalog	Use at POS	Owner
Product details, price, cost, SKU/barcode, active/stock/expiry flags	Edit	Read allowed details; no cost	Use sellable items	Owner

Function	Owner	Manager	Cashier	Instructions
Product variants	Edit	Read	Select at POS	Owner
Product images/business logo	Edit	No	View configured content	Owner
Modifier groups/options/min/max and product links	Edit	No	Select at POS	Owner
Named discounts and activation	Configure	Select at POS	Select at POS	Owner, POS terminal
VAT, service charge, day start, misc, blind close, receipt settings	Edit	No	Follow configuration	Owner
Owner terminal PIN	Set own	No	No	Owner

POS and drawer features

Function	Owner	Manager	Cashier	Instructions
Pair a browser to a branch	Owner credentials	No	No	POS terminal
Unlock/lock as named operator	Yes	Assigned	Assigned	POS terminal
Open/close shift and cash in/out	Own drawer	Own drawer	Own drawer	POS terminal
Search, category browse, barcode, variants, modifiers, weight	Yes	Yes	Yes	POS terminal
Miscellaneous item	When enabled	When enabled	When enabled	POS terminal
Cart quantity/remove/cancel/hold/resume	Yes	Yes	Yes	POS terminal
Named line/order discount and SC/PWD	Yes	Yes	Yes	POS terminal
Free-form discount entry	Owner only	No	No	POS terminal
Cash/card/GCash/Maya payment and reference/change	Yes	Yes	Yes	POS terminal
Pending-payment recovery	Original attempt/operator	Original attempt/operator	Original attempt/operator	POS terminal
Receipt preview/print/reprint	Yes	Yes	Yes	POS terminal

Function	Owner	Manager	Cashier	Instructions
Terminal History	Current terminal	Current terminal	Current terminal	POS terminal
Activity	Branch	Branch	Own branch records	Manager, Cashier
Void	Eligible sale	Eligible sale	Approval	POS terminal
Full-sale refund	Own PIN	Own PIN	Approval	POS terminal
Terminal stock adjustment	Yes	Assigned	Approval	POS terminal
Emergency drawer close	Only when original operator is ineligible	Same condition	Request eligible approver	POS terminal
Paper width/test print/receipt preview	Yes	Yes	Yes	POS terminal
Local unpair	Owner password	Owner password	Owner password	POS terminal

Inventory, reports and lifecycle

Function	Owner	Manager	Cashier	Instructions
Portal stock levels	Yes	Assigned	No	Owner, Manager
Receive delivery/expiry batch	Yes, including cost	Assigned, no cost	No	Owner, Manager
Portal quantity adjustment/reason/note	Yes	Assigned	No	Owner, Manager
Same-business stock transfer	Yes	Assigned source	No	Owner, Manager
Draft/edit/post physical count and count history	Yes	Assigned	No	Owner, Manager
Expiry batch review	Yes	Assigned	No	Owner, Manager
Sales dashboard	All real businesses	Assigned branches	No	Owner, Manager
Analytics scope/date/Overview/Sales/Products/Inventory/Taxes	Yes	Assigned, financial masking	No	Owner, Manager
Profit and Leaks	Yes	No	No	Owner
CSV report downloads	Displayed report controls	Allowed reports, masked fields	No	Owner, Manager
Remote terminal status/unpair	Own businesses	Assigned	No	Owner, Manager
Business activity	Own businesses	Assigned	No portal access	Owner, Manager

Function	Owner	Manager	Cashier	Instructions
Notifications/read/all-read	Owner alerts	Low-stock Alerts view	No	Owner, Manager
Daily summary preference	Real businesses	No	No	Owner; delivery needs email
Demo practice/reset	Practice and reset	Assigned practice	Assigned practice	Complete workflows, Owner
Account export/closure	Owner	No	No	Owner

Website features

Function	Who uses it?	Instructions
Landing copy/navigation/buttons/contact/metadata	CMS user	CMS editor
Marketing media upload/alt text	CMS user	CMS editor
Draft/publish/unpublish terms and privacy	CMS user	CMS editor
CMS user management	CMS user/administrator	CMS editor

Current limits to remember

New owner/manager email onboarding is blocked while mail is disabled. Full offline selling, split payments, partial refunds and customer/order/line note entry are not implemented in the current POS. Some export and catalog-editing limits are described in the relevant procedures. See [Troubleshooting](#) before retrying an uncertain transaction.

[Back to guide home](#) →
